

Appendix 13

Noise Monitoring Statement

In my role as Nuisance Control Officer it is common practice to carry out monitoring visits to assess noise in hotspot areas and premises that have been subject to noise complaints against them. This activity is undertaken by visiting the area and making observations at street level without notifying the management at the premises.

The Nuisance Control Team have conducted noise monitoring visits on the following dates:

1. 20 April 2024 at 01:27
2. 21 April 2024 at 00:32
3. 26 April 2024 at 23:10
4. 27 April 2024 at 23:46

Video footage was captured during 20-21 April 2024 is available by accessing the following links:

On 26 April 2024 at 23:10, observations were made from street level outside Alaturca Lounge and from across the road on the corner of Old Kenton Lane approximately 58.5m away. Loud music was audible at both locations and likely to be intrusive for local residential properties.

On 27 April 2024 at 23:46, similar observations were made from street level outside Alaturca Lounge and from across the road on the corner of Old Kenton Lane. Loud music and heavy bass was detected at street level at both locations. Music levels observed on 27 April were much louder than those observed the previous night (26 April). A special note was made to document the loud music and bass which was audible inside our parked vehicle with the windows closed, parked on the corner of Old Kenton Lane approximately 58.5m away.

The noise levels observed by Officers during all of our recent monitoring visited were deemed to be unreasonably loud and likely to cause widespread noise impact on the residential properties in the area. The visits clearly demonstrated that there was sound breakout of entertainment noise being emitted from Alaturca Lounge and there is no doubt that the current level of sound insulation at the premises is inadequate to contain the entertainment noise from these premises.
