

**Committee Report
Planning Committee on 21 February,
2013**

**Item No.
Case No.**

**06
12/2924**

INTRODUCTION

This application was deferred from the Planning Committee meeting of 13 February 2013 in order to allow the consultation period on the application to be completed before the matter was formally considered by Members. For clarity the relevant press notice expired on 14 February 2013.

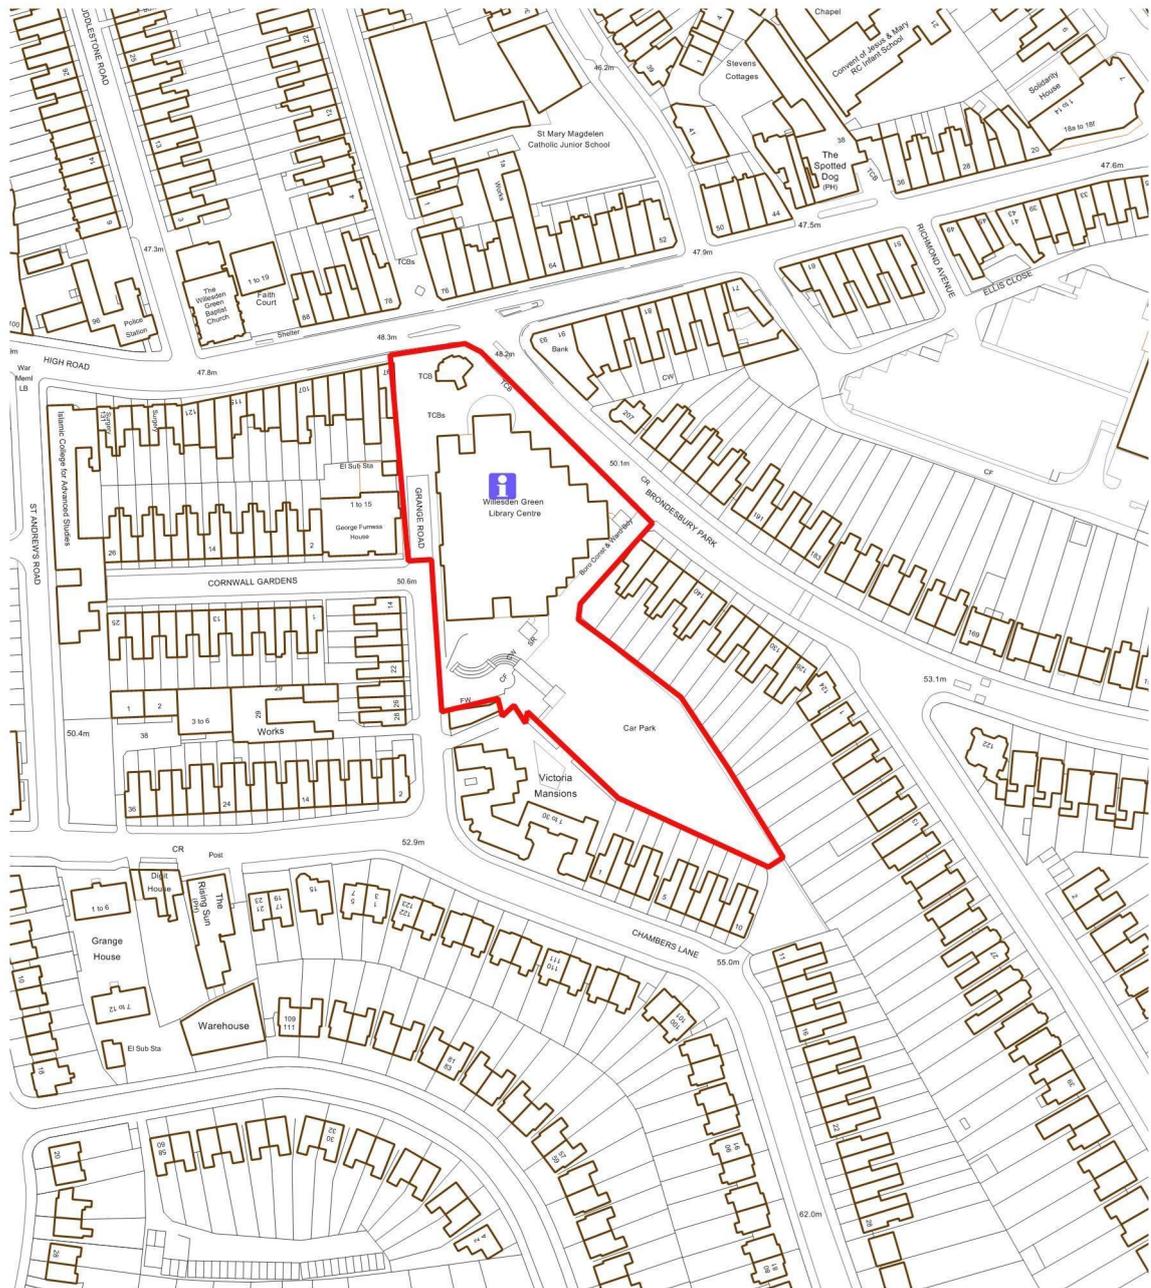

The report has been changed since it appeared in the agenda for the 13 February 2013 meeting specifically in terms of updating any consultation responses that have been received (including comments from Councillors Sneddon and Powney), the floor space figures for the new building, the latest response from TfL and amending the recommendation in order to take account of the deferral.

Planning Committee Map

Site address: Willesden Green Library Centre, 95 High Road, London, NW10 2SF

RECEIVED: 2 November, 2012

WARD: Willesden Green

PLANNING AREA: Willesden Consultative Forum

LOCATION: Willesden Green Library Centre, 95 High Road, London, NW10 2SF

PROPOSAL: Demolition of the existing Willesden Green library building, retention of the former library building on the High Road frontage, and the erection of a new Cultural Centre, including cafe and retail space, along with 95 residential flats (46 one and 49 two bed units) to the rear of the site, with associated car parking

APPLICANT: Galliford Try PLC

CONTACT: URS

PLAN NO'S:
See Condition 2.

RECOMMENDATION

The Committee resolve to agree in principle to grant subject to.

(a) any direction by the Mayor of London to refuse the application. In accordance with Article 5 of the Town & Country Planning (Mayor of London) Order 2008 following the Council's determination of this application, the Mayor is allowed 14 days to decide whether to allow the draft decision to proceed unchanged or direct the Council under Article 6 to refuse the application;

(b) Satisfactory prior completion of a Section 106(s) under the Town & Country Planning Act 1990 and/or other form(s) of agreement/undertaking in order to secure the S106 matters as detailed in this report.

SECTION 106 DETAILS

The application requires a Section 106, or other legal, agreement in order to secure the following benefits:

- Payment of the Council's legal and other professional costs in (a) preparing and completing the agreement and (b) monitoring and enforcing its performance
- A phasing plan to ensure that a number of residential units shall not be occupied until WGCC built and fitted out.
- Up to £40,000 towards improvement of local bus stops.
- "Permit free" on housing element of scheme.
- Achieve sustainability checklist of a minimum of 50%, BREEAM Excellent and as far as the residential element is concerned, Code Level 4.
- Site wide CHP (Combined Heat and Power).
- Join the Considerate Contractors Scheme (CCS).
- Travel Plans for WGCC and housing element.
- Training Package "Brent in2 work."
- S278 Highway Works, relating to works to Grange Road, High Road, Brondesbury Walk and Brondesbury Park, which will include streetscape enhancements.
- Not less than £30,000 of the build cost of the WGCC element towards public art in the public areas of the building.
- up to £10,000 for the promotion and implementation of "car clubs" in the locality.
- Servicing Management Plan for WGCC.
- Mechanism for reviewing the information in the financial appraisal on which Section 106 contributions were based, including post-sales information.

This application is liable for Community Infrastructure Levy.(CIL) . The Mayor's contribution would be £218,960.00.

EXISTING

The Willesden Green library centre is located on the southern side of Willesden High Road immediately to the west of the junction with Brondesbury Park. To the west of the site is Grange Road which is pedestrianised at its northern end.

The very northern section of the site falls within the Willesden Green Conservation Area, with the boundary of the Area falling between the old detached library and the newer library Centre. The detached old library building is a locally listed building and until recently provided accommodation for the Brent Irish Advisory Service.

The existing main library building, which has in the past incorporated, amongst other things, a café, a bookshop and a cinema, was built in the mid-1980's. In terms of its external appearance and relationship with its surroundings, the building is not considered to make a positive contribution to the locality.

There is a large car park to the south of the site that provides a total of 73 parking spaces, vehicular access to which is gained off Brondesbury Park. The existing car park is provided for visitors to the library centre and managed by a system of issuing permits within the centre.

DEVELOPMENT SCHEDULE

The table(s) below indicate the existing and proposed uses at the site and their respective floorspace and a breakdown of any dwellings proposed at the site.

Floorspace Breakdown

USE

Number	Primary Use	Sub Use
1	non-residential institutions	museum / library
2	dwelling houses	housing - private

FLOORSPACE in sqm

Number	Existing	Retained	Lost	New	Net gain
1	5761	4382	1379	4382	-1379
2	0	0	0	7631	7631

TOTALS in sqm

Totals	Existing	Retained	Lost	New	Net gain
	5761	4382	1379	12013	6252

PROPOSAL

This application includes the retention of the original library building at the northern apex of the site, with a new four-storey Cultural Centre building attached to the rear which provides a total of 4,382m² floor area for various uses. These include:

- Library (1,613m²)
- Museum (500m²)
- café (116m², 35 covers)
- function rooms/"creative clusters" (339m²)
- offices (802m²)
- circulation space and toilets.
- staff numbers are proposed to increase from 39 to 69.

No off-street car parking is proposed for the centre.

The residential development to the rear is for a total of 95 private self-contained flats (46 x 1-bed & 49 x 2-bed) in four blocks. A total of 61 off-street car parking spaces (incl. ten blue badge disabled) are proposed (59 of which are in a 2.4m high undercroft car park), with access via a new access road utilising the existing vehicular access point from Brondesbury Park.

Works are also proposed within the length of Grange Road to the west of the site between Cornwall Gardens and High Road. These include provision of a new raised carriageway surface and revised landscaping, including bicycle parking and a children's' play area, together with alterations to on-street parking bays to provide some on-street disabled car parking and servicing facilities for the Cultural Centre.

A new pedestrian link, to be known as Brondesbury Walk, is shown along the rear of the Cultural Centre building. Brondesbury Walk will also serve as a public open space and the use to which it will be put is discussed further below.

As explained above, the development is formed of two discrete elements, but the phasing of the future works will need to be controlled through a legal agreement to ensure that the new Cultural Centre is provided in a timely manner.

HISTORY

84/1334

Planning permission was granted for the new Willesden Green library centre in 1984. It opened in 1989 and the complex originally included a cinema, an arts complex, cafe/retail and commercial space, as well as the library itself. For the information of Members, the Willesden Green Conservation Area was not designated until 1993 and, consequently, the original approval was granted without having to take into account the policy issues that are relevant now and which are discussed below.

12/1190

This planning application proposed demolishing all buildings on the site and the erection of a new cultural centre, cafe and retail space, along with 92 residential flats. The application was withdrawn on 3 July 2012 prior to a decision being made on it.

12/1191

This Conservation Area Consent application proposed demolishing the old library building. It was also withdrawn on 3 July 2012.

12/1234

This planning application to change the use of the ground floor of the Brent archive at 2 Grange Road to a temporary lending library was granted permission on 2 January 2013.

12/2925

This current Conservation Area Consent application seeks consent for partial demolition works to the rear of the old library building to facilitate its link to the proposed Willesden Green Cultural Centre. A report into this case appears elsewhere on this Agenda.

POLICY CONSIDERATIONS

National Planning Policy Framework (NPPF)

The NPPF was published on 27 March 2012 and replaced Planning Policy Guidance and Planning Policy Statements with immediate effect. It seeks to secure positive growth in a way that effectively balances economic, environmental and social progress for this and future generations. It includes a presumption in favour of sustainable development in both plan making and decision making. The NPPF is intended to

provide a framework within which local people and Councils can produce their own distinctive Local and Neighbourhood Plans. It aims to strengthen local decision making and reinforce the importance of keeping plans up to date.

Saved policies from the adopted UDP will have increasingly less weight unless they are in conformity with the NPPF and can be demonstrated to be still relevant. The Core Strategy will also need to be in conformity with both the London Plan and the NPPF. In doing so it has significant weight attached to it.

The recommendation here is considered to comply with the 12 Core Principles set down in the NPPF:

- Planning should be genuinely plan led empowering people to shape their surroundings. Plans should be kept up-to-date and provide a practical framework within which decisions on planning applications can be made.
- Creation of the opportunity to be creative in finding ways to enhance and improve places in which people live their lives.
- Proactively drive and support sustainable economic development to deliver homes, business and industrial units, and thriving local places that the country needs. Plans should set out a clear strategy for allocating sufficient land which is suitable for development in their area taking account of the needs of the residential and business communities.
- Secure a high standard of design and levels of amenity.
- Promote the vitality of the main urban areas whilst protecting the Green Belts around them, recognising the intrinsic character and beauty of the countryside.
- Aim for a low carbon future in a changing climate and encourage the use of renewable resources.
- Conserve and enhance the natural environment and reduce pollution. Allocations of land for development should prefer land of lesser environmental value.
- Encourage the use of brownfield land provided it is not of high environmental value.
- Promote mixed use developments.
- Conserve heritage assets in a manner appropriate to their significance.
- Manage patterns of growth to make the fullest use of public transport, walking and cycling focussing significant development on locations which are or can be made sustainable.
- Support strategies which encourage health, social and cultural well being for all and deliver community and cultural facilities and services to meet local needs.

Mayors London Plan 2011

The relevant issues set down in the London Plan, and identified by the GLA, are as follows:

- Social Infrastructure
- Mix of Uses
- Housing
- Affordable Housing
- Density
- Historic Environment
- Urban Design
- Inclusive Access
- Sustainable Development
- Transport
- Crossrail.

In terms of the enabling housing development, the site is currently car parking which is being re-provided at a significantly reduced level, thus freeing up a site for housing and making more efficient use of land. The more effective use of land is a core principle of the Government's new National Planning Policy Framework (NPPF) published in March 2012. The reduction in car parking provision is appropriate to the location, which has very good public transport access, and is in accordance with policy of minimising car use and promoting the use of alternative modes of travel (London Plan policy 6.1 and UDP policy STR5). Providing additional housing to meet a growing need is a key concern of Government.

Emphasis in the NPPF is for local planning authorities to identify and update annually a supply of deliverable housing sites (paragraph 47). The publication of figures from the Census 2011 have emphasised the need to identify additional land for housing, particularly in London and in Brent where the actual population increase has significantly exceeded all projections. Brent has a significant problem with people living in unsuitable accommodation therefore there is an imperative to maximise the supply of new homes. This need is recognised in London Plan policy 3.3, Increasing Housing Supply, which highlights the pressing need for more homes in London. The provision of 95 new homes will be a welcome addition to the housing supply in

Brent. In terms of the density of housing, it is necessary to consider policy 3.4 of the London Plan, which states that development should optimise housing output for different types of location within the relevant density range shown in table 3.2.

Also relevant is Brent Core Strategy policy CP17 on Protecting and Enhancing Suburban Character in Brent. In terms of density, the number of units proposed is appropriate for the site as it is within a range considered by the London Plan to be appropriate for this type of location (urban) and which benefits from very good public transport accessibility.

Adopted in July 2010, the Core Strategy has 12 strategic objectives:

- Objective 1: to promote economic performance & regeneration
- Objective 2: to meet employment needs and aid the regeneration of industry and business
- Objective 3: to enhance the vitality and viability of town centres
- Objective 4: to promote the arts and creative industries
- Objective 5: to meet social infrastructure needs
- Objective 6: to promote sports and other recreational activities
- Objective 7: to achieve housing growth and meet housing needs
- Objective 8: to reduce the need to travel and improve transport choices
- Objective 9: to protect and enhance Brent's environment
- Objective 10: to achieve sustainable development, mitigate & adapt to climate change
- Objective 11: to treat waste as a resource
- Objective 12: to promote healthy living and create a safe and secure environment

The following spatial policies are considered relevant to this application:

- CP 5 Place making. Sets out requirements for place making when major development schemes are considered
- CP 6 Design & density in place shaping. Sets out the requirements for appropriate design and density levels for development
- CP17 Protecting and Enhancing Suburban Character in Brent.
- CP18 Protection and enhancement of Open Space, Sports & Biodiversity. Protects open space from inappropriate development.
- CP 19 Brent strategic climate mitigation and adaptation measures. Highlights the need for new development to embody, or contribute to, climate mitigation objectives, especially in growth areas
- CP 23 Protection of existing and provision of new community and cultural facilities. Encourages new accessible community and cultural facilities and protects existing facilities. Sets a standard for the provision of new community facilities

Unitary Development Plan 2004

Strategic

- STR3 In the interests of achieving sustainable development (including protecting greenfield sites), development of previously developed urban land will be maximised (including from conversions and changes of use).
- STR5 A pattern of development that reduces the need to travel, especially by car, will be achieved.
- STR11 Seeks to protect and enhance the quality and character of the Boroughs built and natural environment and resist proposals that have a harmful impact on the environment and amenities.
- STR12 Planning decisions should protect public health and safety and in particular, support the achievements of targets within the National Air Quality Strategy.
- STR13 Environmentally sensitive forms of development will be sought.
- STR14 New development to make a positive contribution to improving the quality of the urban environment in Brent
- STR15 Major development should enhance the public realm.
- STR19 New housing developments should provide adequate amenity, reduce need for car travel and improvement to public infrastructure.

Built Form

- BE2 On townscape: local context & character states that proposals should be designed with regard to their local context, making a positive contribution to the character of the area.
- BE3 Relates to urban structure, space and movement and indicates that proposals should have regard for the existing urban grain, development patterns and density in the layout of development sites.
- BE4 States that developments shall include suitable access for people with disabilities.

- BE5 On urban clarity and safety stipulates that developments should be designed to be understandable to users, free from physical hazards and to reduce opportunities for crime.
- BE6 Landscape design in the public realm and draws particular attention to the need to create designs which will reflect the way in which the area will actually be used and the character of the locality and surrounding buildings.
- BE7 Public Realm: Streetscene
- BE8 Lighting and Pollution
- BE9 Seeks to ensure new buildings, alterations and extensions should embody a creative, high quality and appropriate design solution and should be designed to ensure that buildings are of a scale and design that respects the sunlighting, daylighting, privacy and outlook for existing and proposed residents.
- BE12 States that proposals should embody sustainable design principles commensurate with the scale and type of development.
- BE24 Locally Listed Buildings. The special character of buildings on the local list will be protected and enhanced.
- BE26 Alterations & Extensions to Buildings in Conservation Areas. They should retain the original design and materials or where not practicable be sympathetic to the original design.
- BE27 Demolition & Gap Sites in Conservation Areas.

Environmental Protection

- EP3 Noise and vibration
- EP3 Requires developments within Air Quality Management Areas to support the achievement of National Air Quality Objectives.
- EP6 Contaminated land

Housing

- H11 Housing on brownfield sites
- H12 States that the layout and urban design of residential development should reinforce or create an attractive and distinctive identity appropriate to the locality, with housing facing streets, and with access and internal layout where cars are subsidiary to cyclists and pedestrians. Dedicated on-street parking should be maximised as opposed to in-curtilage parking, and an amount and quality of open landscaped area is provided appropriate to the character of the area, local availability of open space and needs of prospective residents.
- H13 Notes that the appropriate density for housing development will be determined by achieving an appropriate urban design which makes efficient use of land, particularly on previously used sites. The density should have regard to the context and nature of the proposal, the constraints and opportunities of the site and type of housing proposed.
- H14 The appropriate land density should be achieved through high quality urban design, efficient use of land, meet housing amenity needs in relation to the constraints and opportunities of the site.

Transport

- TRN1 Planning applications will be assessed, as appropriate for their transport impact on all transport modes including walking and cycling.
- TRN2 Development should benefit and not harm operation of public transport and should be located where access to public transport can service the scale and intensity of the proposed use
- TRN3 Directs a refusal where an application would cause or worsen an unacceptable environmental impact from traffic, noise, pollution it generates or if it was not easily and safely accessible to cyclists and pedestrians.
- TRN4 Measures to make transport impact acceptable
- TRN10 Walkable environments
- TRN11 The London cycle network, schemes should comply with PS16
- TRN12 Road safety and traffic management
- TRN14 New highway layouts, visibility splayed and accesses to and within development should be designed to a satisfactory standard in terms of safety, function, acceptable speeds, lighting and appearance.
- TRN22 On parking standards for non-residential developments requires that developments should provide no more parking than the levels listed for that type of development.
- TRN27 Loss of existing off-street parking
- TRN34 The provision of servicing facilities is required in all development covered by the plan's standards in Appendix TRN2.
- TRN35 On transport access for disabled people and people with mobility difficulties states that development should have sufficient access to parking areas and public transport for disabled people, and that designated parking spaces should be set aside for disabled people in compliance

- with levels listed in PS15.
- PS12 Car parking standards – Class D1
- PS15 Parking standards for disabled people
- PS16 Cycle parking standards
- PS19 Servicing standards

Tourism, Entertainment & the Arts

- TEA2 Location of small-scale tourist, visitor and arts, culture and entertainment facilities.

Community Facilities

- CF5 Location of large scale community facilities
- CF4 Community facilities capable of holding functions should have an acceptable transport impact. Where the number and/or scale of functions could have an unacceptable impact on residential amenity these will be limited by condition.
- CF14 Places of worship permitted where there would be no loss of residential amenity or unacceptable transport impact.

Brent Council Supplementary Planning Guidance and Documents

SPG 17 “Design Guide for New Development”

Provides comprehensive and detailed design guidance for new development within the borough. The guidance specifically sets out advice relating to siting, landscaping, parking, design, scale, density and layout.

SPG19 “Sustainable Design, Construction & Pollution Control”

This supplementary planning guidance focuses on the principles and practice of designs that save energy, sustainable materials and recycling, saving water and controlling pollutants. It emphasises environmentally sensitive, forward-looking design, and is consistent with current government policy and industry best practice, aiming to be practicable and cost-effective.

The Council has previously received a request for an Environmental Impact Screening (EIA) on the site. It assessed other possible impacts and effects of the development, and on 31 January 2012 determined that it considered that there were none that were significant enough to warrant an EIA.

SUSTAINABILITY ASSESSMENT

Major applications need to ensure that they meet sustainability requirements in accordance with London Plan and Council policy. London Plan policy 5.2 requires that residential and non-domestic schemes should provide a carbon reduction of 25% above the Target Emission Rate (TER) outlined in Part L Building Regulations 2010. There is a presumption also for 20% renewables onsite. Council policy CP19 in the Core Strategy expects that major development will achieve BREEAM “Excellent” rating for non residential. For the residential buildings, Code for Sustainable Homes Level 3 is required outside of Growth Areas, but in this case the applicants have confirmed that they will achieve Code Level 4. The Council also requires the completion of a sustainability checklist where a score of 50% is expected.

The submitted energy strategy breaks down the expected carbon savings in accordance with the London Plan Energy Hierarchy. Respective savings are made at each stage of the hierarchy amounting to an overall saving of 40% above the 2011 Part L baseline level. Officers have checked the benchmark assumptions, stated energy outputs and respective savings, shown in the hierarchy against standard outputs, and find them to be accurate and realistic.

For Lean measures (improving the fabric of the buildings), the residential units will benefit from improved U values for floors, walls and windows and improved air tightness above Part L, and energy efficient lighting. The Cultural Centre also makes the above provisions as well as a number of other provisions such as water efficient fittings, energy metering, sensor activated lighting reacting to activity and light levels. These are shown in the BREEAM summary of sustainability commitments. The above provisions make an initial saving of 10% saving above Part L Building Regulations 2010.

In accordance with the Clean aspect (on site energy regeneration) of the London Plan energy hierarchy and the London wide aspiration for 25% of heat and power used in London to be generated through the use of decentralised energy systems by 2025, the submission explores the feasibility of a CHP (Combined Heat and Power) and CCHP (Combined Cooling Heating & Power) system. A CHP system is proposed here in the undercroft area below Block D towards the south of the site making an estimated 29% reduction over the

Lean case. The decision not to proceed with a CCHP unit is explained in the submitted energy statement.

In terms of the submitted Sustainability checklist, the submitted checklist scores 60.7. Although Officers have arrived at a lower figure, even this still meets the Councils SPG19 expectation and, in any event, the obligations signed up to in the checklist will be secured via the legal agreement where opportunities to enhance the offer still further can be explored.

CONSULTATION

Members will be aware that, as explained above, a proposal for a similar form of development was withdrawn early last year. Although no formal decision was made at that time there was a good deal of concern about the form of development and, as a result, a summary of the initial application is set out below.

Previous Consultation (12/1190 & 12/1191)

Over 750 individual objections to the proposal were received in early 2012 and two petitions incorporating several thousand signatures were also submitted. The main focus of the petitions was opposition to the demolition of the locally listed building and called on the Council to prevent that demolition.

A summary of the content of the main objections is set down below:

- 1 – loss of original locally listed library building.
- 2 – reduction in facilities and loss of particular uses that existed within the building.
- 3- loss of open public space.
- 4 – car parking issues.
- 5. – loss of the existing car park.
- 5 - impact of housing element on people living nearby.
- 6 – impact on tree to High Road frontage
- 7 – design of the new development and impact on the Willesden Conservation Area.

Consultation on Current Application (12/2924 & 12/2925)

As far as this current application is concerned a total of 2964 consultation letters were sent out on 8 November 2012. This joint letter made reference to both this Conservation Area Consent application, but also the planning application, a report into which appears elsewhere on this Agenda.

For clarity, all those who had submitted a formal response to the first withdrawn scheme were also notified of this second submission.

A total of 18 site notices (which included 9 relating to the Conservation Area Consent application) were posted at various locations around the application site advertising the proposal as a Departure to the Development Plan and affecting a Conservation Area on 13 November 2012. In addition, a Press Notice was published on 15 November 2012.

A further clarification letter was sent out to all third parties who were either on the original consultation list or who weren't on that list, but had written in subsequently, on 27 December 2012 explaining that the red line application site had been amended to correctly include land to the north of Grange Road within the site, rather than being shown separately as being highway works relating to the development. A further 18 site notices were posted in the locality on 18 January 2013 and a Press Notice appeared on 24 January 2013. There was no change, at all, to the form of the development proposed, which remained unchanged, and the letter simply sought to clarify the question of the application site which was identified in a different way in the original submission.

In response to comments from the GLA (expanded upon in the "Remarks" section) two new pedestrian gates have been introduced to the Block B boundary to Grange Road. Those residents living on the opposite side of Grange Road to these new gates were re-consulted about the change on 24 January 2013.

Representations Received

In terms of considering representations on the proposal it is necessary to set out all those received for the sake of completeness. Although 12/2924 relates to the planning application and 12/2925 to the Conservation Area Consent, the comments received are in certain cases not only about a specific application (ie: comments could have been made about the redevelopment proposals on the Conservation Area Consent

application reference) and so all representations are listed in full below.

12/2924

Comments (this option is given on-line) 31

Support 73

Objections 323

12/2925

Comments 3

Support 0

Objections 54

OBJECTIONS

The principal issues that have been raised are set out below:

- 1. The development would have a detrimental impact on the Willesden Conservation Area. The new library building will over-dominate the area.
- 2. The new building would lose the sense of openness towards the front of the site that the existing building provides for.
- 3. The loss of the open space to the front of the existing library is unacceptable in itself. It is well used by the community. The proposed open space is hidden around the back of the new library building and will not be welcoming.
- 4. Loss of car park to the rear.
- 5. The residential element would provide for high-density accommodation in an already over-populated area.
- 6. Loss of bookshop.
- 7. The facilities in the new building will be less/worse than what is available at present. Existing building should be refurbished, not demolished.
- 8. The scheme should incorporate affordable housing.
- 9. No attempt to consult the community on the future of the site. The motives of the Council are questioned and the proposal benefits the Council and the applicants with no benefit to the community.
- 10. The development will cause traffic problems in the area.
- 11. To knock a building down only 25 years after it was built is a waste of money.
- 12. The development would have an unacceptable impact on the existing residents because of its height and its location. Certain residents have a "Right to light" protected by law, although as Members will be aware these are not material planning considerations.
- 13., The residential element of the proposal is over dense. Too many flats are being proposed.
- 14. The changes to library services that the Council has undertaken recently mean that the new library here must actually be larger to compensate.
- 15. No consideration is being given to the cumulative impact of the developments in Willesden Green on services and infrastructure.
- 16. Lack of continuity of facilities for when the development is taking place.
- 17. The quality and source of letters supporting the development are questioned.
- 18. The validation of the application and the consultation undertaken on it are queried.
- 19. The Council is giving land away to a private developer.
- 20. The works, and the manner in which they will be carried out (eg: site hoardings) will present a danger to the general public.
- 21. Health risks from electricity sub-station.
- 22. To demolish even a small part of the locally listed building would destroy a part of Willesden's history.

SUPPORT

The following points have been made:

- 1. Proposal will provide a new library with improved facilities.
- 2. The development now keeps the locally listed library building which is welcomed.
- 3. The design of the building is improved.
- 4. The development will help to regenerate Willesden.

- 5. The existing facilities (eg: One Stop Shop services) do not provide the level of customer service needed for the future.
- 6. The existing open space to the front of the library building is not as welcoming as it could be.
- 7. The new building will be very sustainable and environmentally friendly.

For the information of Members, a large number of the supporting letters were submitted to the Council via the agents acting for the applicant on 14 January 2013. The letters are in semi-template form, in so far as much of the text is the same in each submission. All letters received raising material planning considerations and other issues have been summarised in this section of the report and the planning considerations are discussed more fully in the report below.

Representations from Councillors

Ward Councillors Jones and Hunter have written in supporting the application. Councillor Jones states that she feels that Willesden deserves a higher profile centre with good facilities. Pleased at the retention of the old library. She feels that the rebuilt centre will be a busy and vibrant place, with better services, including more Customer Service desks which are much needed. Councillor Hunter states that whilst she understands the objections to the proposals, she endorses these views and wishes to support the scheme.

Ward Councillor Sneddon has written to say that while he agrees in principle with the idea of redeveloping the library in conjunction with a residential development, he is concerned with the design which should truly reflect the local character of the area and complements the architecture of the historical library. He is also concerned about car parking in the area.

Councillor James Powney has written to confirm support for the application. The proposed development should enhance the existing cultural facilities, improve the environmental quality of the building and meet, and enhance, the uses of the building in the immediate area. He also raises a concern about future surface water flooding and there is a drainage condition (number 30) that will hopefully address this point. Councillor Shaw has written in explaining that she is opposed to the planning application, on the grounds that it will have an unacceptable impact on her residents.

Members will be aware that in order to give them the best opportunity of appreciating the views expressed in relation to the current scheme a copy of all the representations have been made available for Planning Committee Members at the Town Hall.

Representations from MPs

Sarah Teather MP has written in objecting to the development on the grounds of loss of open space, inappropriate residential development, the loss of the bookshop and Brent Irish Advisory Service, as well as the interim arrangements that will be put in place whilst any new library is being built.

PRE-APPLICATION CONSULTATION

In February 2011 Brent Council's Executive agreed in principle to the redevelopment of the Willesden Green Library Centre, provided that it could be done at zero cost to council tax payers. Since then, both before and after the first planning application on the site was submitted, there has also been a considerable amount of consultation undertaken by the Council which falls outside the statutory planning application process. The Consultation Strategy agreed by the Executive engaged with stakeholders in a variety of ways in order to develop and refine the brief for the new building. It is evident that a number of objectors to this planning application have made a number of comments about this consultation and in their view they do not consider that it has been successful in engaging with residents.

CONSULTEES RESPONSES

SUPPORTING STATEMENTS

It is evident from the comments of the users of the current building, set out below, that it is an inefficient building with many factors limiting its performance, costing more to use than a building that was fit for purpose. As a result running costs are currently very high. A BREEAM Assessment has revealed that the current building has a very low rating, whereas the new building would achieve BREEAM Excellent rating, supporting the sustainability credentials of the new Centre.

The existing spaces are poor and inefficiently laid out, with limited waiting areas for people visiting the Customer Service Centre. There are no meeting rooms for the Customer Centre to use, which is a challenge, and the existing community spaces are considered to be of poor quality.

GLA (LONDON MAYOR)

The application has been referred to London Mayor and his comments on the proposals are set down in some detail within the report.

VICTORIAN SOCIETY

The Society welcomes the retention of the old library building. They are reassured that the value of the building has finally been recognised. The proposal must include full restoration of the exterior of the building, including reinsertion of front door and authentic colour scheme.

ENGLISH HERITAGE

No objection raised.

URBAN DESIGN MANAGER

No objections. Further discussion on the subject can be found in the “remarks” section below.

ENVIRONMENT AGENCY

The development does not meet the criteria that require the EA to be consulted, in terms of flood risk.

TRANSPORTATION ENGINEER

No objection to the proposal, subject to a number of conditions/amendments as set down in the “remarks” section and the applicant entering into a legal agreement for the highway/streetscape works and travel plans.

TREE PROTECTION OFFICER

The revised scheme should mean that less works are likely to take place within the vicinity of the important London Plane tree on the High Road frontage. Tree protection measures would need to be agreed in order to ensure that important landscaping features are retained. Conditions are suggested.

ENVIRONMENTAL HEALTH OFFICER

The EHO has suggested a number of conditions that they consider are necessary in order to ensure that the environmental impacts of the development are acceptable, as far as they relate to noise transmission, air quality and details of the CHP.

MUSEUMS SERVICE

The Brent Museum has low visibility and a poor location in the existing building, meaning that the correct environmental display conditions (eg: the amount of unfiltered light coming into the area) are difficult to achieve. The potential to secure future high profile loans from organisations such as the British Museum is limited for this reason.

The development proposal will provide opportunities to refresh the museum service and work to ensure a growth in the number of visits and levels sustained over the longer term through more comprehensive programming and product renewal. Brent Museum & Archives work with over 2000 pupils every year and there is potential to work with more schools by offering a more diverse, targeted and engaging learning experience, which can be supported by a new museum and temporary exhibitions programme.

Community Gallery and Education Room

These spaces are located in the entrance area of WGLC and suffer from the extreme weather changes that affect the walkway through the building. The Education Room is disjoined from the main Museum spaces and school groups are regularly disorientated in the building and clear staff guidance has to be provided to

facilitate their visit to the museum. The location of the children's library adjacent to the Education Room results in sound overspill from the library into workshops and schools sessions in the Education Room, interrupting the sessions themselves. In the new building the Education Room is next to the museum, this was a fundamental requirement of the brief.

Archives

The inclusion of a fit for purpose and climate controlled on-site store for Brent Archives would support the preservation of the boroughs resources and create an environment where more people could have access to this material. The situation of the Archives on top of the children's library is distracting for researchers too, as the sounds from the library filter into the search room.

LIBRARIES SERVICE

The Head of Brent Libraries, Arts & Heritage states that the redevelopment of the Willesden Library Centre will meet the vision for the library service. The current building is poorly designed and the relatively inflexible internal spaces cannot easily be adapted to modern library needs. Refurbishment would not provide the opportunities to provide a building that would deliver a 21st Century building, comparable in quality to the new Civic Centre. They endorse the points made elsewhere about the poor quality of existing community spaces within the building.

The proposed layout of spaces, adjacencies and functionality of the accommodation means that the new building will be far better able to meet the aspirations of the Service. It is hoped that the new building will increase the number of casual visitors (there are a limited number at present) who enter the library centre at the moment and begin to take the opportunity to explore the improved offer.

CUSTOMER SERVICES (previously One Stop Shops)

The Assistant Director of Brent Customer Services supports the scheme as they say that the current accommodation presents a number of limitations in terms of capacity and the facilities available to customers. There are currently a total of 14 customer booths with no dedicated waiting area and no private interview rooms. There is no space in the current location to expand the number of booths and the lack of space available for a waiting area has meant that we have had to create this within the library space and at some significant distance from the booth location.

The new WGCC will provide improved facilities for customers. This will include increased number of booths (22), access to 3 private interview rooms, and a 25 seat waiting area that bleeds into the library enabling much more flexible use of the space between these 2 functions. The Customer Service centre has been located so that it is adjacent to children and family facilities in the building including play areas, toilets and baby changing areas.

REMARKS

MEMBERS SITE VISIT OF SATURDAY 9TH FEBRUARY 2013

The Planning Committee recently visited the library site and at that time a number of points were raised. They are set out below. Many of them are already covered in the main body of the report and where they are not further explanation is given in brackets below.

- Concern at the timing of The Village Green Inquiry and the Planning Committee
- Re-confirm that the Conservation Area boundary currently runs along the southern side of the High Road between the detached locally listed building and the main library building.
- The relationship the new residential Block A to the footprint of the library centre.
- The accurate height of the London Plane tree in relation to the proposed building.
- This scheme is asset stripping and town cramming with no public benefit.

- No affordable housing.
- This application has been pre-determined. The Council are already asking schools to help with murals in/on the new building. (The actual instruction for any artwork has not yet taken place. The initiative will continue, albeit in a different form, even if the library redevelopment does not take place).
- There has been no consultation on the proposals. The car park is being given away without consulting people.
- The supporting letters are illegal. They are forged and have been submitted in blocks of identical letters. (Further submissions have been made in connection with this point. Councillors, and the GLA if the matter is referred onto them, should contrast the way that these letters were submitted with the number of individual objections sent in).
- The new building will be half the footprint and double the height of anything that is around.
- The internal atrium will be dangerous as people will be able to throw things off. The present building has more security guards than librarians. (This will be an internal management issue and not a planning reason to refuse).
- The scale of the buildings is unacceptable. Block A on Brondesbury Road comes forward of the BP frontage and Block B is two storeys too high in terms of relationship with No.15 Grange Road building. The scheme is “backland” development.
- Impact on No.148 Brondesbury Park (adjacent to the access road) unacceptable. This relationship was specifically discussed on the site visit and is expanded on further below.
- Overspill car parking from the many events that are going to take place in the WGCC building at times when CPZ is not in operation not considered.
- Opening hours of the library queried and whether the floorspace given over to library space will be controlled in the future.
- Brent has closed half its libraries and is then telling everyone to come to this brand new one. The building needs to be much bigger than the existing to accommodate all the new visitors.
- The play nodes that are being proposed throughout the public element were queried.

- INTRODUCTION

- Following an initial assessment of the principle of the development, this section is divided up into a number of subject areas looking at the new WGCC and the residential scheme as two distinct elements.

- PRINCIPLE OF DEVELOPMENT

- This application represents a revised scheme for the redevelopment of this site following the withdrawal of a scheme in early 2012 (12/1190 & 12/1191). Members will be aware that the proposal initially involved completely demolishing the existing locally listed building at the northern end of the site but the opportunity was taken to revisit the proposal, consider the points that had been made in connection with it, specifically the strong desire to retain the old library building, and revise the scheme accordingly. As mentioned above, a range of further engagement activities were held with interested parties following on from the withdrawal of the scheme.
- As explained elsewhere, those who are going to occupy the new library building have confirmed that it will provide better facilities than exist at present and the new Centre will become the main customer facing hub in the south of the Borough. The applicants consider that the existing building would be less able to provide the modern, sustainable, state of the art customer services envisaged for the

future, and that the physical condition of the building is such that substantial work, and cost, would have to be expended just to bring the facilities up to a minimum acceptable standard. The applicants have, therefore, concluded that it is more effective and sustainable to pursue a new facility. There is no planning, design or sustainable policy reason to justify the retention of the existing 1980's building or not to accept the position that has been reached by the applicants.

- The key issue for planning policy in relation to the future of the community provision is how it reflects local needs. While the current provision in general quantitative and qualitative terms is important, community needs may change over time and it is not the role of the planning assessment to be overly prescriptive in the way that various elements are catered for. However, it seems clear that the re-provision of a modern building with the facilities envisaged meets the policy requirement and offers scope to do this in a far more effective and flexible way.
- In terms of access and use of the facilities, the applicant has reviewed how the current building and services have operated. They have confirmed that the needs of future users have been taken in account in the design of the primary facilities, the supporting facilities, access arrangements and the way in which services will be provided in the future.
- As far as the loss of the existing car park is concerned, while the site is not identified specifically as a housing site in the adopted Brent UDP, or the adopted documents of the LDF, the development of it for housing purposes is acceptable in principle, subject to the discussion of relevant policies and issues that are set out below. UDP policy TRN27 states that it will resist the loss of essential off-street parking. Essential parking is defined as (c) public off-street parking strictly necessary to serve public buildings, facilities and spaces. This is not considered to be the case here, as expanded upon below.
- In addition to the relative merits of replacing the existing library centre, there are a number of key planning considerations that inform an assessment of the principle of development.
- The impact of the development on the Conservation Area.
- The impact of the development on the locally listed old library building.
- Loss of the existing car park.
- The provision of outside space.
- Relationship to the public realm, highway and access arrangements
- The merits of the new residential development, in terms of standards, relationship to what is around and the absence of affordable housing.
- Scale and design of the new development
- Implications for servicing of the library.
- Continuity of library services whilst existing building is closed.

NEW CULTURAL CENTRE

FACILITIES WITHIN THE NEW CULTURAL CENTRE

Set out below is a table outlining the spaces within the existing building, an indication of what was proposed through the 2012 withdrawn submission (which involved the demolition of the old library building) and the current proposals.

COMPARISON OF AREAS IN EXISTING AND PROPOSED WGCC

At the site visit on Saturday 9th February 2013 the matter of the floorspace figures of both the existing and the proposed building was raised. As a result, the following revised table has been produced comparing the existing building, the scheme that was submitted in 2012 and subsequently withdrawn, as well as the current application proposal.

For the information of Members, there was an error in the original table as the line at the bottom of the table labelled "Gross Internal Area (GIA)" should have read "Gross Internal Floor Area (GIFA)". For clarity, the difference between these two measurements is that the GIA is defined in the RICS code of measuring practice as the area of a building measured to the internal face of the perimeter walls at each floor level. The GIFA, sometimes referred to as the Total Room Area (TRA), is the sum total of all Gross Room Areas in the establishment, building or floor, depending on which level you are looking at. Effectively it is the area of floor covering you would need for all rooms.

COMPARISON OF AREAS IN EXISTING AND PROPOSED WGCC Nov '12	Existing Area (m2)	Previous Proposals (m2)	Current Proposals (m2)
Library	1517	1395	1613
Customer Service Centre	138	192	194
Museum	500	500	500
Archive	71	70	70
Foyer/ Reception	454	153	70
Community Spaces	344	362	339
Commercial space	333	117	116
Localities	0	164	inc
Offices	282	327	460
Data Centre/ IT	15	97	18
Hygiene Areas	104	146	62
Front of House	12	24	24
Back of House	87	74	68
Cinema	255	0	0
Circulation / misc	604	402	395
Plant	363	230	314
Total NET	3381	3362	3454
Gross Internal Floor Area	5079	4252	4243

Gross Internal Area	5692	4353	4382
Net/ Gross	59%	77%	79%

Looking at these revised figures, the net to gross ratio for the existing and proposed buildings has been recalculated and the revised figures show that the net to gross efficiency would be improved by 20% in the new proposals. The increase in the area for the existing building does seem to confirm what has been said that the existing WGLC is an inefficient building with a large amount of the space given over to things like columns, partitions and spaces which cannot be counted as rooms.

In planning terms, as was mentioned at the site visit, the key point is not that the new building is smaller, or larger, than the existing building. The main report does explain that users of the existing building consider that the new one may well be more efficient, but the key issue from an assessment of the planning merits of the development is that it includes the principal elements that the Council's Library and related services feel are required for a modern facility.

The applicants have carried out a thorough analysis of the proposed building, as compared to the original client brief to ensure that the client brief can still be delivered with the inclusion of the locally listed building and a larger library. This has been achieved by reducing the size of the staff offices and the foyer/reception space from the previous proposals. The area comparison above shows that all major spaces in the new building are now either the same as existing, or larger than in the current building. The one exception is the community space which is 5 square metres smaller than previously. This reduction is as a result of the third community space being reduced in size with a view to improving affordability for prospective users. The fact that the old library building will in the future operate as an additional community space, managed in a similar way to the library lab, means that it too will be available for community use. All services are replicated, or expanded, in a more efficient, sustainable way.

Concern has been raised that there is no specific condition on the size of the library which could lead to alternative uses of floorspace that largely falls within the D1 use class (non-residential institutions). Whilst this point is noted it is not felt appropriate to condition the development in this way, as it is considered reasonable to have flexibility within the use class.

FACILITIES OUTSIDE THE BUILDING

The development proposes to change the current open areas around the building – principally by providing the new 'Brondesbury Walk' and improvements to the public realm in Grange Road. In terms of the external spaces a comparison of both existing and proposed is provided within this application. The range of current outside areas includes the space to the rear of the library, the small children's play area adjacent to it and the space to the front of the library building. It is this space that is subject to the current Village Green application awaiting a Public Inquiry in February 2013. This is discussed later in this report.

The application scheme creates a new street entitled 'Brondesbury Walk' to the rear of the new library which provides a single space larger than any of the single areas that exist at present. However, the space would be some 65 square metres smaller than a combination of the existing space to the rear and the open area to the front (total 565 square metres rather than 625 square metres). This small reduction is acknowledged. However, in qualitative terms it is considered that the proposed spaces will, at least, be equal to the existing offer and will be able to be used for a range of uses, as explained below. The intention is that the space will be used as a new local square for use by existing and future communities. It will be predominantly hard paved, but will include mature trees to provide visual interest and shade. The level change between the WGCC and the residential Block A will allow for a double terrace of seating to be provided for visitors of the Centre to use. The WGCC will open directly out onto Brondesbury Walk and it is this relationship that will, it is anticipated, help to encourage interaction between what happens inside and outside the building. The cafe proposed for the Brondesbury Park side of the WGCC will contribute to this interaction. At the same time the

fact that the space is overlooked by residents in Block A should provide the level of natural surveillance and visibility that would serve to benefit those wishing to use the outside areas.

It is proposed that the new WGCC building will sit in a sensitively interpreted civic space which will provide a high quality setting for the building. The spaces will not only provide formal civic amenity, but interesting play facilities making the public space around the centre as much of a destination as the building. The quality of landscape interpretation, including the use of level changes, has allowed a sensitive designed progression from the civic public spaces adjacent to the Cultural Centre to the semi-private and private areas of the residential development behind.

As far as the use to which the outside space could be put, as well as the more informal activities described above, Brondesbury Walk would also allow opportunities for more formal uses to take place. Service nodes are proposed to be built into the space to allow traders (the application submission gives examples of how market stalls could be laid out) or other event hosts to draw power and have access to services close to whatever it is that they are doing within the space.

In terms of other spaces, the applicants also highlight the value of the changes to the space at the northern end of Grange Road, near to the junction with High Road. While this area is intended to provide access to disabled car parking bays the proposals also include means to promote its visual integration into the landscaped area which should help to strengthen the look and feel of this area as being part of a pedestrian zone. The space, whilst not new, will be significantly improved by the introduction of a paving treatment that will unify all spaces around the WGCC, provide new seating and play clusters. All of these works will take place around the retained London Plane tree.

DESIGN OF THE NEW CULTURAL CENTRE

As explained above, the scheme has developed over time, partly in response to concerns expressed previously, with virtually all of the locally listed building (and all of the original structure) now being retained and being incorporated into the new development. A discussion about the partial demolition of the rear wall of the original library building can be found elsewhere on this Agenda as it is the subject of a Conservation Area Consent (CAC) in its own right. The determination of this CAC falls to the Secretary of State because Local Authorities are unable to determine applications for Conservation Area Consent that they have submitted themselves. Although Brent Council are not the applicants here, a judgement was made that in the particular circumstances of this case, and this site, it would be appropriate to refer the matter on.

The decision to retain the old library clearly has an impact on the form of the new building and the existing and new could be linked in a variety of ways. The architects have decided on a relatively simple, low (it would be the same height as the eaves of the old library) flat roofed glazed connection that provides for entrance points on both the Brondesbury Park and Grange Road frontages. The dimensions of this link space (approx. 5.5 metres wide and a maximum of approx. 16.0 metres from Grange Road to Brondesbury Park frontages at its widest point) has increased in discussions leading up to the submission of the new application and provides a useable internal foyer area. The new entrances in this link structure are set back from the front of the old library on both frontages which helps to maintain the visual integrity of the retained original locally listed building.

The retention of the old library, and the link described above, results in the mass of the new building reading as a clearly separate form. The applicants architects have spent a good deal of time in the submission explaining their design thinking behind the latest version, including examples of other developments elsewhere. When viewed from the High Road the new 4 storey building is visible behind the lower retained building on the frontage. However, its proposed elevational treatment, the separation created by the glazed link, and the stepping in of the upper floor ensure a relationship between the two that announces the new, but does not overpower the original. When viewed from the south along Brondesbury Park and Grange Road, the new building is seen in the context of the height of commercial High Road frontage.

The retention of the locally listed building, and the fact that the new building has to provide a particular range, and level, of facilities in order to deliver the community building that is envisaged means that the size of the building is to a degree determined by this. The front of the new building is "V" shaped in form reflecting the

internal layout and trying not to compete with the old library. The applicants have chosen a simple material palette for the main structure of the new building and added decorative brick within the framework of the facades of the building which are intended to reflect, and take reference from, varied Victorian buildings around. Whilst the building is relatively large, it is considered that it provides an appropriate backdrop to the retained locally listed building. As far as the proposed materials are concerned their quality is going to be key and this will be controlled by condition.

EXTERNAL ASSESSMENT

The qualitative assessment of the proposal is informed by the views of the Council's Architects Design Review Panel (DRP), as well as Brent's own Urban Designers. Members will be aware that in July 2009 the Planning Committee approved the establishment of a Design Review Panel to help the Council secure the highest possible standards of design and innovation for the Borough's Built Environment. The membership of the DRP comprises 25 architects and designers, with 6/8 required to attend any specific meeting. Their role is to provide independent and professional design advice on a diverse range of major developments.

In their assessment of this particular proposal in December 2012 the DRP felt that, if anything, the scheme should be made even more striking in architectural terms, with the new element looking to contrast even more with the retained old library building. They felt that in pure architectural terms they could have supported the loss of the existing building, but they understood the approach been taken. The idea of linking existing and new was supported, subject to the precise detailing proposed.

The application was referred to the GLA and in their Stage 1 response they were extremely positive about the proposal. Their views are expanded upon in the Section below.

RELATIONSHIP TO CONSERVATION AREA

The impact on the Willesden Conservation Area to the front of the site (UDP policy BE25) and the partial demolition of the locally listed building (policies BE24 & BE27) are critical material planning considerations here. As explained above, the works to the locally listed building are subject of a separate application that appears elsewhere on this Agenda, but it is considered that the proposal complies with policy and that the limited amount of demolition to the old library (particularly given the specific element that is now the subject to demolition is non-original) is now acceptable. For clarity, both the Conservation Area and the locally listed building would be defined as "heritage assets" in the NPPF.

The NPPF makes it clear that when determining applications Local Authorities need to understand the significance of any heritage asset that may be affected by the development. Furthermore, Local Authorities should account for the desirability of sustaining and enhancing the significance of heritage assets and putting them to viable uses consistent with their conservation, the positive contribution that conservation of heritage assets can make to sustainable communities, including their economic viability. New development should make a positive contribution to local character and distinctiveness.

In terms of the impact of the development on the setting of the Willesden Conservation Area, Members will be aware that even though the new library building itself will be located outside the Conservation Area, the impact that it would have on the Area still needs to be taken into consideration. It is a well established approach that development proposals outside the Area, but affecting their setting or views into or out of the Area, shall pay special attention to the preservation, or enhancement, of the character and appearance of the Conservation Area in question.

Whereas with the 2012 withdrawn scheme the complete demolition of the old library building meant that the Conservation Area preserve or enhance "test" was always going to be very finely balanced, in this case, the removal of the poorly designed 1980's library building, and the retention of the majority of the locally listed building, means that the impact of the current development on the Conservation Area, is actually considered to be an enhancement. For clarity, the limited works to the old library building also ensures that the well-established London Plane tree, that is widely recognised to contribute so much to the area, will be unaffected by the proposals, further ensuring the overall preservation of the character of the locality.

The design of the new Centre is considered to relate well to the retained locally listed building and will constitute an improvement on the existing, in terms of its design and appearance, for the reasons set out above.

As explained elsewhere in this report, the application needs to be referred to the GLA and the London Mayor will determine whether he wishes to determine the proposal or if he is content for the Local Authority to make the final decision. The GLA have been involved in the evolution of the development and have previously expressed a number of views on it. It is considered useful to consider the views expressed by the GLA in their recent Stage 1 response, as far as they relate to design matters and the impact of the development on the locality.

They say that *“the principle of redeveloping the library site and providing an enhanced, modern community facility in a well designed flexible building space and.....is strongly supported”*.

In terms of the old library building:

“In contrast to the withdrawn application for the site.....the proposal incorporates part of the original library building and reuses it for its original purpose, as the entrance to the library. This scheme preserves the heritage asset and allows the regeneration of the library and the wider site and the restoration and re-use of the historic building is strongly supported and welcomed.”

As far as urban design issues are concerned:

“The proposed development has the potential to have a transformative impact in the area and the current design successfully maximises the potential of the site, adds to the public realm network in the area and provides an impressive new cultural centre with a strong presence on the High Road”.

“The proposal would provide a positive architectural contrast to its setting. The current 1980’s building is a poor pastiche that detracts from the character of the conservation area and the surrounding townscape. The new building creates a strong identity that clearly signposts the civic function of the building and also civic pride in the building. The clear and bold articulation of the elevations captures the self-confident spirit of the areas original Edwardian character and would signpost its rejuvenation”.

Officers acknowledge that the re-provision of a community facility on the site is an urban design challenge. The new WGCC sits on a similar footprint to the existing library whilst retaining the locally listed building, helping to reinstate and reinforce the historic grain and structure of Willesden at this important junction. The massing of the new civic building will be mitigated by the treatment of the exterior of the building. The relatively large mass has been broken down by a strong horizontal emphasis for each floor which significantly reduces the perception of height from the street. The massing is further reduced by a series of vertical rhythms defined by combinations of windows and a special cladding system; this rhythm reflecting the proportions of building within the locality helping to help to connect the building to Willesden town centre.

As far as the old library is concerned, the integration of old and new architecture has been achieved by a simple glazed link between the original Arts and Crafts elevations of Newman and Newman and the contemporary civic architecture proposed. Officers consider that the glazed junction sensitively connects old and new and adds legibility to the entrance. The repaired old library elevations preserve and record the historic development of Willesden, whilst the contemporary super-efficient building behind is considered to enable local services fit for the 21st Century.

The palette of materials proposed for the WGCC will hopefully further underpin the design quality of the building as well as its contribution to the reinvigoration of Willesden. The quality of architecture, materials and execution will act as a catalyst stimulating others to improve the quality of their proposals for development in the area. This view is shared by the GLA, as set out above.

Elsewhere in other sections of this report it can be seen that the GLA had a number of comments about the application proposal that require further work before the matter is referred back to them through the Stage 2 response. However, in terms of their views on the old library building, the design of the new WGCC itself and

the impact on the Conservation Area, it is considered extremely useful to have their views on the overall quality of the proposal. They support the conclusion of Officers that the scheme has developed over time to a point whereby the application can be supported in design and heritage terms.

TRANSPORTATION CONSIDERATIONS (WGCC)

Brent UDP standard PS12 allows a maximum of 1 car space per 5 employees, with visitor parking allowed for 5% of the maximum capacity of the building, giving a maximum allowance of 13 staff spaces and 30 visitor spaces (based on a capacity of 600). This gives a total maximum allowance of 43 spaces. No off-street car parking is proposed to be retained for the Centre, which is in line with the current adopted standards of the Council. These standards state that non-residential development should make provision in accordance with the maximum standards. These can be varied dependent on the level of public accessibility to the particular site and the contribution that the development would make to reduce the use of the private car.

The Council's Transportation Engineer has confirmed that given the highly sustainable location of the application site, with its high PTAL rating and location within a Controlled Parking Zone (CPZ), the absence of any on-site car parking is considered to be acceptable in principle. For the information of Members, the High Road end of the site has a rating of PTAL5, with the southern end of the site PTAL4.

LOSS OF EXISTING CAR PARK

Although the location is a highly accessible one, as was the case with the earlier 2012 application, the loss of the existing 73-space car park to the rear of the site does require further, careful consideration.

Officers have sought additional information in connection with this point and, to this end, detailed survey information on use of the car park and parking conditions in the vicinity of the site has been provided within an amended Transport Statement. This comprised car park occupancy surveys undertaken every two hours between 9am and 9pm on Thursday 16th and Saturday 18th August 2012. Maximum occupancy on each day was observed as 42 cars at 3pm on the Thursday and 61 cars at 9pm on the Saturday. This information has been useful in adding to the understanding of the way that the car park has operated over time.

Surveys of on-street parking in the area identified a total of 521 residents' permit parking bays, 20 disabled spaces and 124 bays for pay and display parking within about 250 metres of the site. Occupancy surveys of the pay and display bays area showed between 44 spaces (5pm) and 54 spaces (9pm) as occupied on the Thursday and between 40 spaces (9am) and 65 spaces (9pm) as occupied on the Saturday. As such, the minimum number of available pay and display spaces in the area was observed at 59, with spare capacity being greater during the day than in the evening.

The only period during which use of the existing car park marginally exceeded the availability of spare parking space in the area was at 9pm on the Saturday. However, in the evening, there are a further 70 on-street parking spaces available on single yellow lines after 6.30pm which can be used by visitors to the Centre. The parking surveys therefore demonstrate that there is sufficient spare on-street parking capacity in the area to cater for overspill demand from library visitors at all times once the existing car park within the site is lost, without any need for visitors to use residents' parking bays. There is also the Sainsbury supermarket further east within Willesden Town Centre that has a car park available for use and may be attractive, for example, to users who make combined trips.

In connection with this point, Sainsbury's have now submitted an objection to the scheme, specifically in relation to the car park at their nearby High Road store. Although they acknowledge that the car park can currently be used by people who aren't solely shopping at their store, they are concerned that any additional use of the car park once the new library building is open will impact on their day to day operations and their customers.

While the current car park is underused, those who have used it will clearly have to adapt to increase their use of public transport or make use of available parking opportunities in the local area. A similar approach is being adopted for the new Civic Centre where there will be significantly reduced car parking for staff and visitors. CPZ's operating in the area will assist in restraining visitor parking on residential streets during

weekday daytime hours. In the future, Brent's Transportation Unit will need to review whether there is any need to extend the operating hours of the CPZ into the evening and weekend to ensure that overspill parking from the Cultural Centre does not inconvenience local residents.

Retention of disabled parking close to the Centre is important and the intention is to provide four disabled spaces along Grange Road. Once again, any such bays will be subject to a Traffic Regulation Order to be progressed by the Transportation Unit in consultation with the public. For clarity, visitors with Blue Badges are able to use residents' parking bays if necessary.

Cycle Parking (Cultural Centre)

A total of 24 cycle parking stands are now shown along either side of the re-landscaped Grange Road, with a further eight stands indicated towards the western end of Brondesbury Walk, providing a total of 64 publicly accessible spaces for staff and visitors to the Cultural Centre. This is in line with UDP standard PS16.

Staff changing and showering facilities are indicated within the staff rooms on the third floor of the building, in line with standards.

Servicing (Cultural Centre)

Studies of delivery profiles for offices, libraries, museums and café/retail units from other developments across London have been provided to respond to previous issues over the developments' servicing requirements. Although the survey data is not taken from the existing library on the site the approach used is considered by Transportation Officers to be reasonably robust.

This exercise produced an estimated total of 15 deliveries to the site per day, four of which would be by large HGV's, with the remainder by cars or vans. The delivery profile is assumed to be spread fairly evenly across the course of the day, but to assist in this, it is essential that a Servicing Management Plan is produced and implemented through the S106 process and this has been acknowledged in the submitted Transport Statement. Signage and parking enforcement is also to be used to control parking in the loading area, as outlined in the proposed Travel Plan.

The new WGCC will also have access to parking for two "Escort"-sized vans which are currently available at the nearby Grange Road annex building and at a remote location.

As before, a storeroom with space for eleven 1,100 litre Eurobins is indicated along the Grange Road frontage of the building for general waste and recycling, which will entail daily access by refuse vehicles to the northern end of Grange Road. Tracking diagrams have been submitted to demonstrate that large refuse vehicles would be able to access and turn in this area, by reversing into the western end of Brondesbury Walk. This is considered to be acceptable by the Council's Transportation Engineer and the specification for the construction detail of the resurfaced length of Grange Road will need to take these swept paths into account. This will be controlled through the Section 278 agreement.

Pedestrian Access (Cultural Centre)

Level access is proposed to the Cultural Centre via the new glazed link from the High Road frontage and from Brondesbury Walk, with ramps provided to a 1:21 gradient where they are used. The provision of Brondesbury Walk is again welcomed as a means of retaining and improving permeability across the site. All external doors to the Centre, aside from one fire exit door, have now been amended so as not to open outwards into the public highway. This one remaining door is sited alongside the cycle stands on the eastern side of Grange Road, so has a measure of protection from direct conflict with pedestrians using the street and is unlikely to be used frequently, given that it is a fire door.

TRANSPORT IMPACT

An amended Transport Statement was submitted with this revised application which, following previous requests now includes detailed questionnaire surveys of staff and visitors at the existing library to ascertain how they currently travel to the site and where they travel from. This is very much welcomed as providing a

far more realistic representation of existing and future travel patterns than the previous exercise of looking at other sites across London and making comparisons. The survey was undertaken between 9am and 8pm on Tuesday 21st August and counted a total of 1780 visitors leaving the building across the course of the day. The peak arrival time was 10-11am, when 226 visitors entered the building, with the peak departure time being 5-6pm when 212 people left the building.

The questionnaire survey results showed that 86% of visitors travel less than 3km to the site (with 39% travelling less than 1km), showing that the catchment area is very local. It is of course recognised that this may alter if the Centre becomes the community hub in the south of the Borough as is anticipated. The modal split is therefore much more heavily weighted towards walking than previously assumed, with 42% travelling by foot, 28% by car, 22% by bus and 7% by other modes such as rail or motorcycle. For car journeys, 97% used the library car park. 85% of visitors solely visited the library, with 10% also visiting shops in the area.

Staff journeys were generally longer and as such, the modal split was more heavily weighted towards car use, with 44% travelling by car, 41% by public transport and 11% by foot. There are 39 staff at present meaning that applying this breakdown equates to 17 of those arriving by car at present.

The previously submitted Transport Statement concluded that the development would not have any significant impact on the local transport network, either through vehicle movements or car parking, even with the addition of enabling residential development. The data from these surveys bears this out, with the conclusion that the library actually generates less traffic and parking than previously assumed and the reduction in car parking within the site and implementation of Travel Plans should assist further to this end. As such, this proposal is considered to be generally acceptable in transport impact terms.

TRAVEL PLANS

Workplace Travel Plan

A workplace travel plan has been submitted, setting out a package of measures aimed at reducing single occupancy car journeys by staff by 10%, increasing walking and cycling trips by 2% and increasing public transport trips by 8% over the next five years, based on modal share figures gained from the staff survey which has been carried out. Surveys will be undertaken one, three and five years after opening to assess progress towards this target. Transportation Engineers consider the content of the Travel Plan to be fine with regard to staff travel, but needs to be amended to include consideration to reducing the proportion of visitor trips to the development by car. Any consent for the site should, therefore, be subject to a S106 Agreement requiring the submission and approval of an amended Travel Plan for the Cultural Centre that also includes measures aimed at reducing visitor trips by car.

Residential Travel Plan

The submitted Residential Travel Plan includes a series of measures aimed at reducing single occupancy car journeys by 5% and increasing walking and cycling trips by 5% over the five year period following completion of the development, based on modal share figures for the local area from the 2001 Census data. The precise figures and targets will be more firmly established following baseline surveys when the proposed residential properties are occupied to a level of 50%. These arrangements are acceptable in principle.

The Travel Plan does not include consideration of the promotion of Car Clubs in the area (including subsidisation of membership amongst residents). Officers do however acknowledge that these are highly valuable elements where they are introduced and the GLA have made reference to the concept in their submissions. As a result, a sum is now included in the proposed Heads of Terms to deal with the promotion and implementation of a Car Club. It is acknowledged that the development is proposing a high number of car parking spaces within it, however, it is considered that the inclusion of a contribution towards a Car Club is justified. As far as the management of car parking within the site, which is a key measure in terms of looking to reduce car usage and ownership, any Travel Plan needs to be adjusted to take these measures into account.

RESIDENTIAL ELEMENT OF THE PROPOSAL

PRINCIPLE OF DEVELOPMENT

The discussion above responds to the issue of the loss of the existing car park. On this basis, while the site is not identified specifically as a housing site in the adopted Brent UDP, or the site specific proposals of the LDF, the use of, what may be considered a backland site for housing purposes is acceptable in principal, subject to the discussion of appropriate policies and issues set out below.

DENSITY

As explained above the site has good access to public transport and is classified as “urban” according to the GLA. The London Plan density matrix therefore suggests a residential density of between 200 and 700 habitable rooms per hectare or 45-260 units per hectare.

The proposed density here, taking into consideration the site area, is approx. 149 units per hectare. This is in line with the density range as set down in the London Plan and the GLA have confirmed that the application complies with the London Plan in this respect.

IMPACT ON THE CHARACTER OF THE AREA

The residential element will be located to the rear of the site and consists of 4 blocks providing for a total of 95 dwelling units. Block A (5 storeys) links Grange Road and Brondesbury Park to the south of the Cultural Centre, whilst Block B (5 storeys) fronts onto Grange Road to the south. In the centre of the site are proposed Blocks C and D (ranging from 2 to 5 storeys) which incorporate a 61 space car park below. The top floors on the taller blocks have been set back in order to reduce the overall apparent mass of the buildings. In terms of Block B, concerns were expressed that it was in excess of what is around, but the applicants have provided a range of near and long views of the proposed building which suggest that the degree of set back of the top floor would mean that it effectively reads as a 4 storey building from the streetscene.

All other elements have been designed so as to comply with the Council's adopted SPG17 guidance “Design Guide for New Development”, in terms of physical relationship between existing and proposed buildings. However, proposal is to build on the existing car park, which has been in existence for over 20 years and so it is acknowledged that the relationship of adjoining and nearby residents to the appearance and use of the site would change. The purpose of SPG17 is to balance and mitigate changes to the existing environment in terms of overlooking, loss of privacy and avoiding overbearing impacts to acceptable levels. It is in order to respond to this that the scheme has been amended over time.

The development proposes what might be considered to be development of a backland site, albeit one which currently has access to it from a number of points, so is not a true backland proposal in the way that it would normally be understood. Nevertheless, there is a key issue concerning an assessment over the impact that the proposal would have on the character of the locality. The scale of the buildings is not considered to be out of character with what is around at present, certainly as far as the height of the proposed buildings are concerned, and sections through the application site have been provided demonstrating that, even at the highest point of Block C, it is no higher than the buildings either side of it in Brondesbury Park and in Grange Road. The taller blocks are to be found at the northern end of the site, providing a transition between the WGCC and the lower density housing further south. Blocks C and D certainly reduce in scale to reflect their more sensitive relationship with neighbours, but also the irregular shape of the southern section of the site. Again, all of this is a clear improvement as compared to earlier proposals and, particularly when considered alongside the comments about proposed density above, is considered to be an indication of the appropriateness of the form of development proposed.

One of the locations on the site that have been of long-standing concern to Officers is the eastern end of Block A where there are habitable room windows in its south-facing rear. These will need to be carefully considered in terms of impact and the applicants have sought to restrict views down into the most sensitive locations in Brondesbury Park residences, by the use of physical measures to prevent overlooking, as well as carefully thought out tree planting and taking advantage of the existing high boundary wall. It is unlikely that

there will be any loss of privacy within existing residential properties, although some external garden spaces may be overlooked. The applicants are understandably keen to ensure the elevational integrity of Block A is not harmed, but by the same token it is considered that the measures do need to be in place to minimise any loss of amenity and this seems an acceptable approach. Further work would need to be controlled through a condition attached to any consent, which might consider a range of mitigation measures that restrict or limit outlook from certain windows in the most sensitive locations. This could include physical screening or the use of louvres (of an appropriate design) which would prevent any views towards the most sensitive locations.

At the Members site visit, a specific concern was raised about the forward projection of Block A onto Brondesbury Park as it would be sited forward of existing residential buildings. In planning terms there is no "building line" beyond which any building should not come. Instead, if a building is sited forward of what is around, the impact of that building needs to be carefully considered. In this case, it is considered that the design assessment has confirmed that, although the new building will inevitably have an impact on the streetscene, this impact would not be an unacceptable one.

UNIT MIX

The proposed development would consist of the following unit mix.

Block	1 bed	2 bed	Total
A	25	23	48
B	8	13	21
C	7	8	15
D	6	5	11
Total	46	49	95

As is evident, the development will comprise 1 and 2 bed units. Members will be aware that there is a significant demand for larger family units in Brent and that household sizes in the Borough have increased over time. The Core Strategy resists proposals that result in the loss of family sized units for precisely this reason. Officers would normally be seeking a mix of units in a development of this size that included an element of larger units and the GLA in their comments have indicated that they find the housing mix "disappointing". However, they also say that they accept the viability information that demonstrates that the mix is predicated on the residential element enabling the new WGCC and, consequently, accept the mix. Officers endorse this view and would normally seek a different mix, but, on balance, accept the proposal for the reasons set down above, noting the town centre location.

UNIT SIZE

Members will be aware that the Mayor's London Plan seeks larger flat sizes than those set down in the Council's own SPG17 "Design Guide for New Development" and it is that standard for internal spaces that should now be used when assessing residential quality. The table below compares the unit sizes within the proposed development in comparison to the standards set out in the London Plan and SPG17.

Property Size	Proposal (m ²)	London Plan (m ²)	SPG17 (m ²)
1-bed	50	50	45
2-bed (3 person)	61	61	55
2-bed (4 person)	70	70	65
3-bed	0	74 (4 pers) 86 (5 pers)	80

All of the proposed units would comfortably exceed the minimum standards set out in SPG17 and would comply with the London Plan, in terms of quantity of internal space. A further consideration here is the overall quality of accommodation. The 2012 withdrawn scheme included some single aspect north facing units, which Officers consider to be incapable of providing an acceptable quality of environment, and those have all been deleted from this iteration. This means that, in terms of outlook and light, all units would be able to provide adequate internal spaces fully in compliance with both SPG17 and the London Plan, ensuring a satisfactory standard of accommodation for potential future occupiers.

AMENITY SPACE & PLAY AREA

The proposed development would provide large communal gardens consisting of a children's play area, hard play area and general soft landscaping areas. Private amenity space is provided for occupiers of the proposed development by way of private gardens, terraces and balconies totalling 1155 square metres of space. The landscaping areas provide a further 2655 square metres of outside space. The guidance set out in SPG17 would require a total provision of 1900m² (95x20m²) of amenity space for the proposed development which is more than satisfied.

The play areas within the residential element of the proposal would include areas with equipment and hard surfacing for free play. Further details of the proposed areas, which would only be for the use of residents or their visitors should be required by way of condition.

The development shows a proposal that would allow sufficient space to provide a range of useful, useable outside amenity areas to meet the likely differing demands of future residents. The development would afford future residents a satisfactory standard of amenity.

URBAN DESIGN

The area surrounding the subject site is primarily residential, with the commercial High Road to the north. Brondesbury Park to the east is made up of 2 and 3 storey residential buildings which have rear gardens of reasonable length, ranging from approx. 15 metres to approx. 30 metres, where they border the application site. Grange Road to the west has similar heights of buildings but also is the site of the 4 storey Victoria Mansions which backs onto the existing car park. The car park itself is flanked by these residential properties with planted boundary walls forming the boundary to the site at the rear.

LAYOUT & MASSING

As explained above, the proposed residential development would involve the erection of four residential blocks, referred to as Block A, B, C and D. The shape of Block A relates directly to the WGCC with the centre of this curved block also being the centre line of the Cultural Centre. The layout also then provides a setting for the public space between the WGCC and Block A.

The layout of the proposed blocks behind Block A have been designed within their own landscaped setting (public access to the area will be restricted) which is considered appropriate as it would help to provide for an attractive environment for future occupiers and maintains security to existing rear gardens. The sites communal outside spaces will be separated from any vehicular movements whilst maintaining good levels of natural surveillance.

The layout, and siting, of the blocks has, in part been derived from ensuring that their relationship with the nearby residential development complies with adopted SPG17 standards, in terms of separation distances. In particular, Blocks C and D are located towards the centre of the site in order to ensure that the relationship with the nearest residential boundaries is an acceptable one. There is a significant change in levels within the site, with the southern end of the car park higher than the northern High Road end. This has meant that it has been possible to incorporate a lower storey of undercroft/semi-basement car parking through excavation whilst at the same time minimising the height of Blocks C and D. Viewed from the western boundary of the site they would read as 3 and 2 storey buildings respectively with the top floor of Block C set back from the perimeter to seek to reduce massing still further.

The proposed Blocks A and B would generally be 5-storeys in height with the top storey set back. The height of Block A is considered to be acceptable, acting as a transition between the WGCC and the main residential element of the site. Block B along Grange Road is a similar height and is more of a balanced consideration given its relationship with what is found nearby. The proposed development would be taller than the existing housing opposite, and Officers have previously expressed the view that the building should be a storey lower than it is, but the top floor of the proposed Block has been reduced quite significantly from what was proposed originally (it now only incorporates 2 units) and it would be set back from the front edge of the roof by approx 6.2 metres. The top storey would also be set off the southern edge of the roof by 6.8 metres. The

applicants have provided 3D street views that demonstrate that the views of this top floor will, as a result of these changes, be extremely limited from within the local area and, as a result, although it will be higher than properties opposite, and it is going to be built on the part of the site that currently has no buildings on it, given the set back of the top floor it is considered that, on balance, the scale of the proposed development along Grange Road would be appropriate in design terms. In streetscene terms, the erection of Block B does help to repair the open gap in the street that the existing library centre created along Grange Road.

ELEVATIONAL DESIGN

The facade of the proposed residential development would be brick built, designed with a simple palette of materials in mind. The top floor on each block is, as explained above, set back from the edge of the roof and these would be clad in metal cladding panels to provide a contrast. The elevations are generally well considered helping to establish an appropriate rhythm within the development and also assisting in seeking to reduce the perceived scale of the buildings. The elevations are also treated with well proportioned windows and balconies which would add visual interest.

Officers consider that the choice of materials and the architectural approach taken is an appropriate one. In general, the materials proposed would respect the context and character of the surrounding area, but create an identity for the new development. However, to ensure adequate quality a condition should be attached to any permission requiring the submission of samples for approval.

IMPACT ON RESIDENTIAL AMENITY

As explained above, the layout and form of the building has to a degree been derived from an assessment of residential properties that currently surround the subject site. This is most obvious in terms of the existing properties within Brondesbury Park to the east and Grange Road to the west and Blocks C and D have had to be changed quite significantly since the development was first presented in response to the application of the Council's adopted SPG17 guidance and a need to ensure that any impact would be within acceptable limits.

Members will note the new residential building at Number 15 Grange Road which would back onto the new site. This is the location where the relationship between existing and proposed is tightest, with 14 metres between buildings. However, No.15 was built with a small outside space to the rear relying on outlook across the existing car park site. The new building (Block C) has been designed so that there will be no windows facing towards No.15, and the physical impact is minimised by the siting of the new block. There will be a landscaped podium to the rear of the existing block which will help to provide a reasonable setting. The relationship is a tight one but is, on balance, considered to be acceptable.

DAYLIGHT/SUNLIGHT & OUTLOOK

Members will have over time become familiar with the various means by which impact of developments can be assessed. Officers most often use the quantitative tests set down in adopted SPG17 which seek to minimise impact, as far as privacy, light and outlook are concerned, by using a variety of assessments. In this case, the development complies with all those assessments.

However, taking the issue a stage further, in perhaps a more technical analysis, the applicant has commissioned a daylight, sunlight and overshadowing report. This examines the impact of the proposed development on neighbouring occupiers. The assessment methodology is based on the Building Research Establishment (BRE) guidelines on "Site Layout Planning for Daylight & Sunlight" (2011) which are summarised as follows:

- If the Vertical Sky Component (VSC) at the centre of a window is 27% or greater than the window is likely to enjoy adequate daylight.
- If the VSC is less than 27% but the overall reduction in VSC from its previous level is less than 20% then it is also considered that adequate daylighting would occur.
- If VSC is less than 27% and the reduction in VSC from the previous level is greater than 20% then adequate daylight may not be available. However, this should be confirmed through a more detailed

assessment of the Average Daylight Factor (ADF).

In this case the results are fairly conclusive in that they confirm that the development will be acceptable when it is assessed against the BRE guidance. The one exception is there is one room in George Furness House on the western side of Grange Road above the existing library archive where the existing building already has a significant impact on the amount of daylight available. The assessment reinforces the conclusions of the SPG17 analysis that the impact on people living nearby will be within the acceptable range. For clarity, it does not conclude that there will be no change for people living nearby, because self-evidently there will be, but it does confirm that the loss of sunlight and daylight to existing residents, inside buildings and also in garden areas, will not be significant.

PRIVACY AND RELATIONSHIP BETWEEN BUILDINGS

As discussed above, the various frontages of the new flats within the site would be in excess of 20m from the nearest sensitive window locations within those buildings that back onto the existing car park. In terms of the relationship with Brondesbury Park, the closest distance is approx 22 metres at the northern end of Block C and this figure increases to closer to 30 metres at the southern end of Block D. As far as Grange Road is concerned, in terms of window to window separation distances, the distance between the proposal and Victoria Mansions is approx. 24m and this reduces slightly towards the south of Block D as it backs onto Chambers Lane properties. However, in all instances, separation distances would continue to exceed 20 metres and this is the distance set down in the Council's adopted SPG17 guidance. It is, consequently, considered to be sufficient to ensure that a reasonable relationship is preserved for occupiers of all nearby properties. The form, siting and height of the development have been changed over time since the first iteration so as to now comply with the guidance.

Officers have had long-standing concerns about the relationship between the rear of the eastern end of Block A, where there are habitable room windows, and the nearest Brondesbury Park property. Although there is unlikely to be any issue of window to window relationships here, the proposed windows will need to be carefully considered. The applicants have sought to restrict views down into the most sensitive locations, by the use of physical measures to prevent overlooking, as well as carefully thought out tree planting. Although the existing library building has a significant visual and physical impact, it has no windows and the introduction of such features does require attention. As mentioned above, further work needs to be controlled through a condition attached to any consent.

In terms of the relationship between the proposed blocks within the site themselves it is noted that in general the window-to-window and window-to-balcony distances would also comply with the guidance contained in SPG17. The closest point of separation between two buildings occurs towards the west of the site where the southern elevation of Block A and the northern elevation of Block B are only approx. 5.4m apart. Five units in Block A and 4 in Block B are affected. However, whilst this relationship would perhaps be tighter than might normally be considered, the number of most affected rooms has been minimised, with any loss of privacy now being designed out by the siting of windows. There will be issues of outlook, particularly from the lower level units, but none of the affected rooms are single aspect and it is not considered that this relationship is so poor that a refusal of consent could be justified on this ground only.

TRANSPORTATION ISSUES (HOUSING)

As explained above, the site has good access to public transport services and is also located within a CPZ. This means that the adopted UDP allows for a reduced maximum parking allowance of 0.7 spaces per dwelling to be applied to this site. This gives a slightly increased allowance of 66 spaces as compared to the withdrawn 2012 scheme. The proposed provision of 63 on-site spaces therefore accords with standards, although so would a reduced level of parking, or an entirely "car-free" development, given the sustainable location.

A "Permit-Free" agreement is required through the S106 Agreement, withdrawing the right of future occupants of the development to on-street parking permits in the area and ensuring that they are fully notified of this prior to occupying any unit. This approach is consistent with the development of other sites in this part of the Borough and is needed to ensure that overspill parking does not impact on the existing roads nearby to

the detriment of existing road users.

UDP standard PS15 requires at least 1 in 20 spaces to be widened and marked for disabled people and the proposed provision of ten such bays in the basement is sufficient to meet this standard in numerical terms.

Electric car charging points should be provided for at least 10% of the parking spaces and a minimum of 13 such points are to be provided to meet London Plan policy.

Cycle Parking (Residential)

Bicycle parking comprising a total of 96 spaces is indicated within secure storage rooms within each block, ensuring a much better spread of provision across the site than indicated previously, to ensure convenient access to cycle parking space for residents of each block. Members will be aware that adopted policy requires one bicycle space to be provided per residential flat so as to contribute to the provision of real alternatives to the use of the private car and the scheme (95 flats) meets this policy.

Servicing (Residential)

Swept path diagrams have been provided showing the tracking of larger vehicles within and around the site, confirming that large refuse vehicles and fire appliances will be able to successfully enter the residential site access road, turn and leave in a forward gear.

Whilst adequate internal bin storage is shown for each of the blocks, the reversing distance shown for refuse vehicles accessing the store for Blocks C and D is again 28m, contrary to British Standard BS5906 (2005) which recommends a maximum reversing distance of 12m. However, the route is straight and should be relatively lightly trafficked. The Council's Safer Street Officers (Recycling and Waste Team) have confirmed that there are means by which this issue can be overcome (eg: re-locating a bin store or putting management arrangements into place). These arrangements will need to cover Block B as well where the wheeling distance between the store for and the loading point exceeds Brent's recommended distance of 10m. As explained, Brent's Safer Streets Unit have confirmed that all waste collection arrangements are acceptable, in principle, which should avoid difficulties in the future.

As before, the indicated reversing distance of 20m to allow fire appliances to stand within 45m of all building entrances complies with requirements.

Street Layout (Residential)

It is envisaged that the space within the residential element of the development will operate as a "Homezone" with a shared surface landscape. A block-paved surface treatment is proposed for the vehicular access route into the site, with a kerb or channel and bollards indicated to separate the carriageway and footways. This approach is generally fine. The carriageway is drawn as 5.2 metres wide with delineation to each edge. The shared surface will still need to ensure that vehicles can pass one another due to the relatively high levels of servicing anticipated and the minimum width of 5.5 metres carriageway width should allow this to happen.

Most doors adjacent to the footway have now been amended to open into the building or have been set back, with the sole exception of the door leading to Block C bin store. Transportation Officers will seek the alteration of this doorway to open inwards, as with all developments.

A projecting first floor balcony has also been shown from Unit C03 in Block C which encroaches very close to the kerblines of the access road, making it vulnerable to damage by service vehicles. This balcony needs to be amended accordingly. The entrance ramp to the undercroft car park below Block C needs to be amended to 4.8m plus margins and this is easily achievable.

The design of the junction onto Brondesbury Park is now shown with 6m kerb radii and a raised table, with the fob controlled entrance gates set 13.5m from the highway boundary, all of which is acceptable. Tracking has also been provided to demonstrate that large delivery vehicles would be able to turn left into and out of the site without overrunning the opposing traffic lane, whilst sightlines will also be fine.

Pedestrian access to the residential part of the development will be available from Brondesbury Walk via ramps, with a 1.3m wide footway with gates also available alongside the vehicular access road from Brondesbury Park, which is acceptable. The previous access route from Grange Road between Blocks A and B has now been removed following concerns about security, but given the other available routes, this is also acceptable.

As before, further details of surfacing, lighting and drainage for the residential access roads and footpaths will also be required as a condition of any approval.

LANDSCAPING/TREES/OUTSIDE SPACE

The retention of the locally listed building means that potential impact on the well-established TPO London Plane tree to the front of the site should be minimised. This has always been one of the key aspirations of the Council and is welcomed. Confirmation about the impact of construction, workability and future management arrangements on that tree will be sought in due course, but it is now easier to make a case that the vitality of the tree would be protected.

The Council's Tree Protection Officer has assessed the impact of the development on trees outside the site (particularly in rear gardens of Brondesbury Park houses). Sections through the site have been provided across the site in a number of locations, as well as along its length. This is helpful and has allowed an understanding of what is happening to the existing boundary walls that border the car park at the rear.

The ventilation required for the proposed basement car park under the residential block means that vents need to be provided within the landscaped setting around the new buildings. This means that the proposed treatment of these outside spaces, in terms of the use of contours and planting in order to mitigate their impact visually needs to be carefully considered, but also the potential noise generated from within the car park, and emanating from the vents needs to be assessed. The work undertaken by the applicant indicates that the matter is capable of being dealt with in an acceptable way and the Council's Environmental Health Officer has confirmed that problems from noise and odours are unlikely to be a problem. If specific issues did arise from excessive noise this could be covered by the Environmental Protection Act 1990 and the air quality within the car parking area itself should be covered by the Building Regulations. This would mean that the air that emanates from the vents would be unlikely to constitute a nuisance for people living nearby.

An Ecology report has been prepared that looks at the impact of the development on existing habitats and assess whether there would be likely to be any of these habitats that would support protected or otherwise notable species. The report found that although there may be nesting birds on the site, there would be unlikely to be any detrimental impacts on particular species or nature conservation sites. In any event, the need to secure BREEAM Excellent, controlled through the legal agreement, would provide opportunities for a number of enhancements (eg: green roofs, tree/shrub planting) that would serve to positively impact on biodiversity.

In terms of the proposals for the resurfacing of Grange Road further detail is required in terms of materials, but the principle of raising the carriageway surface and repaving it with block paving is acceptable. The footways along either side of the road are clearly shown retained solely for pedestrian access, which is an improvement on the withdrawn scheme.

Details of the play areas within Grange Road are also required, with the Design & Access statement describing a "play offer...set within colourful, circular motifs in paving." These could include hopscotch or snakes & ladders markings on the ground or potentially stepping stones etc. Whatever the details they are likely to add visual interest to the paving materials and create a visual link between the play areas to the front and the back of the Cultural Centre. From a highway perspective, as long as no moving play equipment (swings, roundabouts etc.) are proposed in this area, this would be acceptable in principle.

The inclusion of seating in this area is noted and welcomed and it is noted that a 3m wide emergency access route is retained through the existing pedestrianized zone for the use of fire appliances.

Transportation Engineers have confirmed that all works to Grange Road will require approval and vetting by

the Transportation Service and changes to parking spaces and access arrangements will also be subject to a Traffic Regulation Order. Delivery of the works may be undertaken by the Transportation Service at the applicant's expense or under their supervision through a Section 278 Agreement, but in either case, the works will need to pass through a detailed approval process for construction works, which will allow proposals to be firmed up.

AFFORDABLE HOUSING

Affordable housing would normally have been sought for a development of this nature. However, the applicants have supplied a financial appraisal which shows that the objective of delivering the WGCC has to be off-set against the normal affordable housing requirement. The viability information is provided in two forms with a summary that is public, that has been part of the information consulted upon, and more detailed information that the applicants consider should be kept confidential.

Viability is material to the planning process. Commercially sensitive financial information can be submitted in confidence by an applicant. The Council's Director of Legal and Procurement has confirmed that she considers that this is a reasonable position for the Council to take.

The Council can take account of the benefits to the public of the provision of the WGCC against the lack of the provision of affordable housing, in accordance with normal planning policy where viability demonstrates that one off-sets the other, due to viability issues.

The GLA have considered the financial information and have confirmed their view that as the residential development is required to enable the redevelopment of the Cultural Centre which is of significant public benefit, at no cost to the Council, the applicant is not required to provide affordable housing.

SECTION 106/MAYORAL CIL

The Council has accepted not to seek the normal Section 106 financial contributions (which would equate to £432,000, given the contribution of £3000 per bedroom), as set out in the adopted SPD. It has taken the view that in light of the financial appraisal here the overall benefit of securing in excess of £10 million of works, as well as the value of the items listed under the Heads of Terms set out at the start of this report, and the CIL contribution payable to the Mayor, that the package of benefits proposed is adequate in these circumstances. In addition to this, Members will be aware that a significant proportion of the normal Section 106 payments would be aimed at education contributions. The GLA have highlighted the relatively low child yield and Brent has a programme for primary and secondary school expansion.

The proposal would lead to improvements to service delivery, as explained above, as well as to the public realm and multi-functional public amenity space. It is hoped that all of this will be for the benefit of existing, and future, residents, as well as assist in the regeneration and rejuvenation of the area generally.

For the avoidance of doubt, one of the Heads of Terms will allow the Council to review the situation, post-sales, which would cover any change in circumstances since the financial appraisal was originally produced and potentially result in monies coming back to the Council.

REFERRAL TO THE GLA

On 13 November 2012, the Council notified the Mayor of London about this planning application as being referable to him under Category 3E of the Schedule to the Town & Country Planning (Mayor of London) Order 2008. This Category states that any application which does not accord with one or more provisions of the development plan in force in the respective area and which proposes over 2500 square metres of floorspace for a use falling within a number of particular use classes (in this case Class D1) has to be referred to the Mayor.

In this case, the policy that the scheme does not accord with is UDP policy BE27 which states that consent will not be given to a building, or alteration involving demolition of part of a building, in a conservation area, unless the building, or part of the building, positively detracts from the character or appearance of the Conservation Area. The demolition in question is also the subject of a separate Conservation Area Consent

application that can be found elsewhere on this Agenda. That report provides more of a detailed assessment of the demolition work proposed. In terms of the CAC, as explained above, the application needs to be referred on to the National Planning Casework Unit for their consideration. Local Authorities are not able to consider their own applications for Conservation Area Consent, along with other types of application, and although Brent Council are not the applicant here, the circumstances of the specific case meant that the judgement was made to refer the matter on, given the Council's interest in the site. With the previous proposals (12/1190 & 12/1191) which proposed the complete demolition of the locally listed building the issue was very clear that CAC was needed. In this case, it is less so and, consequently, a matter for judgement. The proposal effectively retains the original building, with only a small element of non-original building being removed, but the view was taken to follow the referral route as demolition works, albeit of a later wing added in the 1980's as part of the current library development, were proposed.

In terms of the GLA, in the event that Members resolve, in principle, to grant consent here, the application would need to be referred back to them at Stage 2 following their Stage 1 response dated 20 December 2012. As explained above, in that letter they indicate that there are many positives that they see in the proposal (in particular the urban design, heritage and community benefits of the scheme) with support being given for it. However, the Mayor does not consider that the development fully complies with the London Plan. He does feel that with a number of changes it "could" do so and it will be necessary to explain how the Council have dealt with the Stage 1 comments if the matter is referred back.

The GLA have made comments that require additional information/changes about a number of matters. Officers have responded to the points and although it is possible that a formal response from the Mayor will not have been received in advance of the Committee meeting (Members will be updated if it is) it seems likely that the particularly issues can be resolved.

The comments included the following:

- The interface between the development and Grange Road not as successful as could be. A revised plan introducing pedestrian gates to Grange Road from Block B has been submitted and consulted on.
- Detailed comments about accessible toilets and changing places within WGCC.
- Location of wheelchair accessible housing and disabled parking to serve that housing.
- A number of highway comments have been raised including Car Club and electric charging points, cycle parking standards, "Legible London" signs, bus stop audits and the overall level of car parking.
- Measures to ensure the demand for cooling within the building will be minimised, along with route of the proposed heat network on the site requested.

Since the original report was written, the Council has heard back from Transport for London (TfL), who are part of the GLA family, and they have made a number of comments on how they feel that t

The issues that they raised in their Stage 1 response have been addressed. A summary of their comments is as follows:

- The car parking spaces provided are now in accordance with the London Plan.
- 13 Electric Vehicle Charging Points are welcomed, but passive provision for a further 11 spaces needs to be provided. 10 Blue Badge disabled car parking spaces are acceptable and plan of where these will be located is requested.
- Recommends as part of the Travel Plan the developer commits to providing an initial years membership to the car club for all future residents.
- Further work on bicycle parking spaces is requested, in terms of visitor cycle parking space and staff parking which should be covered. TfL welcomes the provision of shower and changing facilities for staff use and this

should be secured through condition.

- TfL welcomes the commitment to carry out audits of bus stops 'L' and 'J' located on Brondesbury Park, followed by any necessary action in order to ensure that the existing bus stops are in line with current accessibility standards.
- TfL previously commented that further work was required on both the full residential and workplace Travel Plans. They welcome the funding of travel plan measures.
- a Servicing and Management Plan (SMP) and Construction Logistics Plan (CLP) should be secured by condition.

As explained above the matter does need to be referred back to the London Mayor and in the event that he is not satisfied with the response to the points raised in the GLA Stage 1 response it is likely that he will impact on the form that his Stage 2 response takes. The Mayor will decide if he is content for planning permission to be granted or if he wishes the proposal to be refused. This formal assessment will not take place until Brent Planning Committee have made their own resolution.

OTHER CONSIDERATIONS

VILLAGE GREEN APPLICATION.

As explained above, Officers give little weight to the existing open area between the library centre and the locally listed old library building in planning terms. The discussion of the relative merits of the reprovided space in the application proposal is set out above.

Nevertheless, Members will be aware that a Public Inquiry heard in front of an independent Inspector took place last week to consider the application to have the open area mentioned above registered as a Town, or Village, Green. Officers have sought legal advice on the matter and this has confirmed that, in terms of process, the Village Green application is not a consideration that should defer consideration of the planning application. The decision to resolve to grant planning consent, on proper planning considerations, subject to referral to the appropriate body, does not need to be conditional on the outcome of the Village Green Inquiry.

INTERIM ARRANGEMENTS FOR LIBRARY USERS

It is acknowledged that the period when the Centre is closed will result in a reduction in the services that will be available on a day to day basis until the new facilities are up and running in the new building. This is inevitable in any development of this nature. However, the Council has prepared a number of temporary measures that will seek to ensure that as many of the functions that are currently provided at the Willesden Green Centre continue to be provided whilst the Centre is closed.

A temporary lending library will be provided in the Grange Road annex on the west side of Grange Road and benefits from planning permission for such a use. The Lewinson Centre to the west of the current site on the High Road will also operate in a similar way in order to ensure the continuity of service in the area.

In terms of study facilities, a total of 50 additional study spaces have been organised at locations around the Borough.

An interim strategy is in place to ensure that the council services which are currently delivered from the WGLC continue, these include Libraries, Brent Museum, Brent Archives and the Customer Services Centre. The Council is also working with consultants who are delivering regeneration projects on the High Road to investigate options for temporary services in currently vacant properties on the High Road in order to provide even more services to the community (for example a temporary Library Lab) which would be able to provide additional study space.

There are also three third party occupiers in the existing buildings, although the original report said there were only two. Whilst the Council does not have a statutory obligation provide alternative accommodation the Council is assisting them by exploring options for new accommodation, this includes Brent Irish Advisory

Service (BIAS) located in the old Victorian library and Brent Artists Resource (BAR) located on the ground floor of the WGLC. In addition to these two, part of the first floor library is occupied by the Exchange Group, a government funded organization providing IT training. The Exchange Group has got training centres across London and have expressed an interest in locating to another location in Brent during the interim period.

ALTERATIONS TO RED LINE SITE BOUNDARY AND PRESS NOTICE EXPIRY DATE

As explained in the Consultation Section of the report, the Council undertook a full re-consultation of all interested parties informing them of the change to the red line boundary around the application site. As was explained in the letter to third parties no other element of the scheme had changed as a result of this. A complete new round of consultation, consisting of over 2900 individual letters, was undertaken and 18 site notices re-posted in the vicinity of the site. The Press Notice in the Harrow Observer appeared on 24 January 2013 meaning that the 21 day period of this re-consultation expired on 14 February 2013, the day after the date of the original Committee meeting.

As the planning application will need to be referred to the GLA for consideration (and the CAC application appearing elsewhere on the Agenda sent to the National Planning Casework Unit) the Council is not in a position to formally determine the application at the meeting. The respective bodies that are having the matter referred onto them will be made aware of all representations that have been received right up to the time that the Planning Committee makes their resolution.

HIGHWAY IMPACTS OF ALTERATIONS TO RED LINE SITE BOUNDARY

One of the points raised by certain parties is that there would be a safety issue arising from the site boundary, in that it includes land that is currently used by the general public. For clarity, the red line boundary on the planning application drawings is not an indication of where any future hoardings, for example, will be located and, in fact, the location of the hoardings around the construction site will undoubtedly change as each phase of the development is undertaken.

Nevertheless, the highway safety implications of any footway closures or carriageway narrowing necessitated by the construction works are recognised to be important and this issue, along with all other logistical issues, will need to be addressed through the applicants Construction Method Statement (CMS); the purpose of which is to ensure that there is minimal disturbance/disruption to the public during the construction period. Transportation Engineers have confirmed that any planning consent that is issued through the CMS for hoardings etc. would not be sufficient by itself to allow hoardings to be erected over the footway and that the Highway Authority has a duty to ensure that the safety and convenience of pedestrians is maintained to a reasonable degree.

CONCLUSIONS

While this scheme, and its predecessor, has raised significant concern from some sections of the community across a range of issues highlighted in this report, the proposal is considered to provide the following principal benefits:

- There has been a significant change to the proposal that formed the basis of 12/1190 & 12/1191 responding to the substantial objections that were raised at that time, in that the locally listed library building is now retained and incorporated into the scheme. The change also ensures the continued vitality of the important tree to the front of the site.
- Brent libraries are keen to pursue the development as part of their strategic review of library and community services. They have highlighted the need to programme the various elements within the new building to deliver the project, subject to planning approval eg: temporary re-location, customer service roll-out, etc.
- Design issues have been widely reviewed and supported by the GLA and the Council's Design Review Panel.
- The Cultural Centre would deliver a modern high quality building in its own right which would serve as a

contribution to local regeneration. Again, this point was specifically acknowledged by the GLA.

- In terms of the housing element, overall the provision of good quality, well-designed accommodation which has the new blocks sitting reasonably comfortably within the site and its surroundings.

As a result, Officers consider that the application can be supported, subject to referral to the London Mayor.

RECOMMENDATION: Grant Consent subject to Legal agreement

(1) The proposed development is in general accordance with policies contained in the:-

- Brent Unitary Development Plan 2004
- NPPF
- Council's Supplementary Planning Guidance
- Mayors London Plan

Relevant policies in the Adopted Unitary Development Plan are those in the following chapters:-

- Built Environment: in terms of the protection and enhancement of the environment
- Environmental Protection: in terms of protecting specific features of the environment and protecting the public
- Housing: in terms of protecting residential amenities and guiding new development
- Town Centres and Shopping: in terms of the range and accessibility of services and their attractiveness
- Tourism, Entertainment and the Arts: the need for and impact of new tourists and visitor facilities
- Transport: in terms of sustainability, safety and servicing needs
- Community Facilities: in terms of meeting the demand for community services
- Design and Regeneration: in terms of guiding new development

CONDITIONS/REASONS:

(1) The development to which this permission relates must be begun not later than the expiration of three years beginning on the date of this permission.

Reason: To conform with the requirements of Section 91 of the Town and Country Planning Act 1990.

(2) The development hereby permitted shall be carried out in accordance with the following approved drawing and documents:

Ref. 11034_(EX)_0001 03 – Site Location Plan

- Ref. 11034_(EX)_0002 02 – Site Allocation Plan

Town Planning Statements;

- Design and Access Statement;
- Heritage Statement;
- Transport Assessment;
- Residential Travel Plan;
- Workplace Travel Plan;
- Sustainable Design and Construction Statement;
- Energy Statement;
- Operational Waste Management Strategy;
- Preliminary Site Waste Management Plan;
- Flood Risk Assessment and Drainage Strategy;
- Site Investigation Report;
- Ecology Report;
- Air Quality Screening Assessment;
- Tree Survey Report;
- Noise Assessment;
- Daylight, Sunlight & Overshadowing Report;
- Statement of Community Involvement;
- Pedestrian Safety Statement; and
- Design and Access Statement Addendum.

Reason: For the avoidance of doubt and in the interests of proper planning.

- (3) No development shall take place, including any works of demolition, until a Construction Method Statement has been submitted to, and approved in writing by, the Local Planning Authority. The approved Statement shall be adhered to throughout the construction period. The Statement shall include details of:
- i. Specification of construction works at each phase of the development
 - ii. Construction Logistics Management
 - iii. Consideration of environmental impacts and required remedial measures
 - iv. Erection and maintenance of security hoarding including decorative displays, where appropriate
 - v. Wheel-washing facilities
 - vi. Parking of vehicles of site operatives and visitors
 - vii. Arrangements for the loading and unloading of plant and materials
 - viii. Storage of plant and materials used in constructing the development
 - ix. Scheme for recycling/disposing of waste resulting from demolition and construction works
 - x. Commitment to adopt and implement the Considerate Contractor Scheme

Reason: To allow the Local Planning Authority to exercise proper control over the

development in the interests of amenity.

- (4) The dwellings shall achieve a Code Level 4 in accordance with the requirements of the Code for Sustainable Homes: Technical Guide. No dwelling shall be occupied until a Certified Assessor has confirmed that the dwelling has achieved Code Level 4 and a final application has been made to obtain a Final Code Certificate.

Reason: In order to allow the Local Planning Authority to exercise proper control over the development in the interests of ensuring a sustainable form of development.

- (5) All residential units shall be designed to achieve daytime and night time internal noise levels of 30 dB LAeq. A test shall be carried out post-completion and submitted to the Local Planning Authority for approval in writing, to show that the criteria has been met.

Reason: In order to ensure an adequate quality of residential environment

- (6) All parking spaces (including disabled parking bays and electric car spaces), turning areas, loading bays, access roads and footways shall be constructed and permanently marked out prior to first occupation of the part of the development to which it relates unless otherwise agreed in writing by the Local Planning Authority.

Reason: In order to allow the Local Planning Authority to exercise proper control over the development in the interests of amenity and highway safety.

- (7) No goods, equipment, waste products, pallets or materials shall be stored or deposited in any open area within the site and the loading areas indicated on the approved plans shall be maintained free from obstruction and not used for storage purposes (whether temporary or permanent) unless prior written approval has been obtained from the Local Planning Authority. All loading and unloading of goods and materials shall, where practicable, be carried out entirely within the curtilage of the site.

Reason: To ensure that materials or vehicles awaiting or being loaded or unloaded are parked in designated areas and do not interfere with the free passage of vehicles or pedestrians within the site and along the public highway and in the interests of the visual amenities of the area.

- (8) All residential units within the development hereby approved shall be built out in compliance with Lifetime Homes Standards.

Reason: In order to ensure an adequate quality of residential environment

- (9) 10% of all residential units within the development, hereby approved, shall be easily adaptable for wheelchair users, as defined by the Mayor's SPG (November 2012) ie: do not require structural alterations (such as removing walls to enlarge rooms) to make it suitable for wheelchair users.

Reason: To ensure a development that would meet the needs of all potential users and in

order to comply with the provisions of the London Plan.

- (10) The ground floor frontages of the Cultural Centre shall remain visually open with visibility between the adjacent streets and the internal use at all times, unless otherwise agreed in writing with the Local Planning Authority.

Reason: To ensure a satisfactory development that maintains active frontages with surrounding streets.

- (11) Notwithstanding the provisions of the Town and Country Planning (Use Classes) Order 1987 (or in any provision equivalent to that Class in any statutory instrument revoking and re-enacting that Order with or without modification) and the Town and Country Planning (General Permitted Development) Order 1995 (or any order revoking and re-enacting that Order with or without modification) the use of the area denoted as "Retail" on the ground floor plan hereby approved shall only be for purposes within Use Classes A1, A3 or A4, unless otherwise agreed in writing by the Local Planning Authority, providing that any extraction equipment required by the uses are approved by the Local Planning Authority in advance of the unit being served by the required extract equipment being occupied.

Reason: To allow an appropriate level of flexibility in the use of this floorspace and in the interests of amenity.

- (12) The ground floor commercial premises (A1, A3 or A4) shall not be used except between the hours of:

- 0700 hours and 0000 hours Mondays to Saturdays

- 0900 hours and 2300 hours Sundays and Bank Holidays

Reason: To ensure that the development does not prejudice the enjoyment by residents of their properties.

- (13) The heat and power systems installed shall either meet or improve upon the emissions standards and technical details described in the Air Quality Impact assessment. Prior to the commencement of the use the applicant shall provide details of tests undertaken on the installed systems to demonstrate that the emissions standards have been met and shall maintain the unit thereafter so as to ensure that the standards continue to be achieved.

Reason: To protect local air quality in accordance with Brent UDP policies EP3 and EP4.

- (14) No works shall commence on the development before an Arboricultural Method Statement for the development has been submitted to and approved in writing by the Local Planning Authority. Such details shall include:

(i) A schedule of all works to trees on-site to facilitate the development or ensure the health of the tree(s)

(ii) For those areas to be treated by means of any hard landscape works including access Roads and pathways, provide:

- detailed drawing(s) of those areas to be so treated including identification of

root-protection zones;

- details of a no-dig solution for areas within root-protection zones using a cellular confinement system to include a method statement for such works;
- attendance of a qualified and experienced arboricultural consultant during sensitive operations;
- works to trees should be carried out by an Arboricultural Association Approved Contractor in accordance with the latest industry guidance (British Standard 3998:2010);

The works shall be completed in accordance with the approved details. The applicant shall give written notice to the local planning authority of seven days prior to carrying out the approved tree works and any operations that present a particular risk to trees

Reason: In order to allow the Local Planning Authority to exercise proper control over the development in the interests of amenity.

- (15) No works shall commence for each phase of the development before a Tree Protection Plan for the development has been submitted to and approved in writing by the local planning authority. Such details shall include method statements and plans which:

(i) adhere to the principles embodied in BS5837:2012

(ii) indicate exactly how and when the retained trees on-site or off-site near the site boundaries will be protected during the construction; and

(iii) show root-protection zones

Provision shall also be made for supervision of tree protection by a suitably qualified and experienced arboricultural consultant and details shall be included within the tree protection statement. The development shall be carried out strictly in accordance with the agreed details.

Reason: To ensure retention and protection of trees on the site in the interests of amenity.

- (16) No development (save for demolition) shall take place until details to demonstrate compliance with the measures set out in the Sustainability Strategy, hereby approved, have been submitted to the Local Planning Authority. Once approved the development shall be fully implemented in line with those measures.

Reason: In order to allow the Local Planning Authority to exercise proper control over the development.

- (17) Prior to the commencement of the development hereby approved, a site investigation shall be carried out by an appropriate person (approved by the Local Planning Authority) to determine the nature and extent of any contamination present. The investigation shall be carried out in accordance with a scheme, which shall be submitted to and approved by the Local Planning Authority, that includes the results of any research and analysis undertaken as well as details of remediation measures required to contain/treat or remove any contamination found. The

results of the investigation shall be submitted to the Local Planning Authority and any remediation measures required by the Local Planning Authority shall be carried out in full.

Reason: To ensure the safe development and secure occupancy of the site proposed for use in accordance with Brent's Unitary Development Plan policy EP6.

- (18) No above ground development (save for demolition) shall take place until details and samples of the materials to be used in the construction of all the external surfaces of the development hereby permitted have been submitted to and approved in writing by the Local Planning Authority. These design details shall pay particular attention to the junction of the new building to the locally listed old library building. Development shall be carried out in accordance with the approved details.

Reason: To ensure a satisfactory development that does not prejudice the amenity of the locality, in general, or the Willesden Conservation Area, in particular.

- (19) No above ground development (save for demolition) shall commence until details of any external lighting shall, including the external lighting fixtures and a light contour plan for the land surrounding the building shall be submitted to and approved in writing by the Local Planning Authority, prior to the commencement of any works on site and the approved details shall be implemented in full unless otherwise agreed in writing with the Local Planning Authority.

Reason: In the interests of safety and the amenities of the area

- (20) No above ground development (save for demolition) shall take place until details of the layout and design of the cycle storage areas shall be submitted to and approved in writing by the Local Planning Authority prior to the commencement of work on site. The details shall include the configuration and layout of any such areas, and details of the cycle storage fixtures. Thereafter the development shall not be occupied until the cycle parking spaces have been laid out in full accordance with the details as approved and these facilities shall be permanently retained.

Reason: To ensure satisfactory facilities for cyclists.

- (21) No plant machinery or equipment shall be installed externally on the building unless details of the equipment, the expected noise levels to be generated and any measures to mitigate against the external transmission of that noise, have been submitted to and agreed in writing by the Local Planning Authority unless agreed otherwise in writing by the Local Planning Authority. Thereafter the plant/equipment shall be installed in accordance with the approved details and maintained in accordance with the relevant manufacturer's guidance

The noise level from this plant together with any associated ducting, shall be maintained at a level 10 dB (A) or greater below the measured background-noise level at the nearest noise-sensitive premises. The method of assessment should be carried out in accordance with BS4142:1997 "Rating industrial noise affecting mixed residential and industrial areas".

Should the predicted noise levels exceed those specified in this condition, a scheme of insulation works to mitigate the noise shall be submitted to and approved in writing by the Local Planning Authority and shall then be fully implemented.

Reason: In order to ensure adequate insulation and noise mitigation measures and to safeguard the amenities of adjoining occupiers and future occupiers.

- (22) The Cultural Centre shall achieve a BREEAM Excellent Rating. Prior to occupation, a BREEAM post-construction review shall be submitted to the Local Planning Authority to verify delivery of this specification.

Reason: In order to allow the Local Planning Authority to exercise proper control over the development in the interests of ensuring a sustainable form of development.

- (23) The development shall not be occupied unless a detailed car park management plan has been submitted to and approved in writing by the Local Planning Authority. The management plan shall include the means by which the parking spaces will be allocated, secured and enforced between the various users of the site and the approved plan shall be implemented in full for the life of the development. The car park shall be used only for the purposes set out within the approved plan and shall not be used for any other purposes.

Reason: To ensure a satisfactory form of development.

- (24) Prior to first occupation of the development, a completion report and certification of completion shall be provided to the Planning Authority, stating that the remediation scheme has been fully carried out and the site is suitable for end use (unless it has been previously confirmed by the Planning Authority that no remediation measures are required).

Reason: To ensure the safe development and secure occupancy of the site proposed for use in accordance with Brent's Unitary Development Plan policy EP6.

- (25) The development hereby approved shall not be occupied unless details of external CCTV cameras to be used on site are submitted to and approved in writing by the Local Planning Authority. Once approved the approved details shall be implemented in full and permanently maintained.

Reason: In the interests of safety, amenity and convenience.

- (26) A management plan shall be prepared in respect of the new Brondesbury Walk area and this shall be submitted to, and approved in writing by, the Local Planning Authority, prior to first occupation of the Cultural Centre.

Reason: In order to allow the Local Planning Authority to exercise proper control over the development.

- (27) The development hereby approved shall not commence (save for demolition works) unless a scheme for the landscape works and treatment of the surroundings of the proposed development, including the new Brondesbury Walk, has been submitted to, and approved in writing by, the Local Planning Authority. The approved details shall be fully implemented prior to first occupation of the development or in accordance with a programme agreed in writing

with the Local Planning Authority. Such a scheme shall include:-

- (a) a planting plan, including (including species, plant sizes and planting densities);
- (b) proposed walls and fences, indicating materials and heights;
- (c) any proposed contours and ground levels, including areas around the car park vents;
- (d) areas of hard landscape works and proposed materials;
- (e) all seating, play equipment and other furniture, including the proposed play nodes.
- (f) details of the proposed arrangements for the maintenance of the landscape works.

Any planting that is part of the approved scheme that, within a period of five years after planting, is removed, dies or becomes seriously damaged or diseased, shall be replaced in the next planting season with others of a similar size and species and in the same positions, unless the Local Planning Authority first gives written consent to any variation.

Reason: To ensure a satisfactory appearance and setting for the proposed development and to ensure that it enhances the visual amenity of the area.

- (28) In order to mitigate the possibility of numerous satellite dishes being installed on the buildings hereby approved, details of a communal television system/satellite dish provision shall be submitted to, and approved in writing by, the Local Planning Authority. The approved details shall be fully implemented.

Reason: In the interests of the visual appearance of the development, in particular, and the locality in general.

- (29) The development hereby approved shall not commence (save for demolition works) unless a number of additional details have been submitted to, and approved in writing by, the Local Planning Authority. Once approved, these details must be fully implemented and permanently maintained:

- (a) door to Block C bin store to open inwards;
- (b) redesign of balcony to unit CO3 in Block C to ensure adequate clearance for vehicles using access road;
- (c) further details of the southern elevation of Block A to incorporate physical measures to mitigate any overlooking to nearby residential properties;
- (d) all plans to Block B to be amended in order to incorporate the alterations to the Grange Road boundary treatment (inclusion of pedestrian gates);
- (e) refuse storage facilities and collection arrangements.

Reason: In order to ensure a satisfactory form of development and in order to allow the Local Planning Authority to exercise proper control over the development.

- (30) The development hereby approved shall not commence (save for demolition) unless a drainage strategy, detailing on and/or off site drainage works has been submitted to and approved in writing by the Local Planning Authority. The development shall not be occupied

until the approved details have been implemented in full.

Reason: To ensure a satisfactory form of development.

- (31) Prior to the commencement of the development (save for demolition works) the applicants shall submit details for approval of a ventilation scheme for the development designed to protect future residents from the effects of poor air quality. The ventilation system shall be installed, and maintained, in accordance with the approved details.

Reason: To protect the amenity of residents of the development.

- (32) Prior to the commencement (save for demolition) of the development hereby approved the applicant shall provide an Air Quality Impact Assessment demonstrating the effect of the proposed heat and power systems for the development will be within acceptable limits.

Reason: To protect local air quality in accordance with Brent UDP policies EP3 and EP4.

INFORMATIVES:

- (1) The provisions of The Party Wall etc. Act 1996 may be applicable and relates to work on an existing wall shared with another property; building on the boundary with a neighbouring property; or excavating near a neighbouring building. An explanatory booklet setting out your obligations can be obtained from the Communities and Local Government website www.communities.gov.uk
- (2) Whoever carries out the works is reminded of their obligation to comply in full with s60 of the Control of Pollution Act 1974 and the British Standard Codes of practice 5228:1997 Parts 1 to 4 which states that Construction/refurbishment and demolition works and ancillary operations which are audible at the site boundary shall be carried out only between the hours of: Monday to Friday 08:00 to 18:00, Saturday 08:00 to 13:00 and at no time on Sundays or Bank Holidays.
- (3) The applicant is informed that, for the avoidance of doubt, this permission does not give consent for any shopfront or advertisements on the building which would require formal approval in their own right.
- (4) The applicant is advised that this case is liable to pay the Community Infrastructure Levy (CIL) and the liable party/parties should contact the S106/CIL officer Angus Saunders (angus.saunders@brent.gov.uk, 020 8937 5237) for further information on how to pay CIL and their duties under the CIL Regulations. A separate Liability Notice has been issued to liable party/parties or those with a material interest in the land which contains greater detail.

The applicant is advised that this case is subject to a section 106 legal agreement and the developer should contact the S106/CIL officer Angus Saunders (angus.saunders@brent.gov.uk, 020 8937 5237) for further information on how to pay any financial contributions and how to address any non-financial obligations.

- (5) The applicant is informed that they should contact Thames Water Developer Services, Maple Lodge, Denham Way, Rickmansworth, WD3 9SQ in order to discuss the development.

Any person wishing to inspect the above papers should contact Andy Bates, The Planning Service, Brent House, 349 High Road, Wembley, Middlesex, HA9 6BZ, Tel. No. 020 8937 5228
